### ENGLISH

Thanks for choosing Polar! In this guide, we'll walk you through the basics of using Polar Speed Sensor *Bluetooth*® Smart, the perfect choice for boosting your cycling performance.

You can download the full-length user manual and the latest version of this guide at [polar.com/support](http://polar.com/support).

Please write down the device ID printed on your sensor (picture 1). The original marking may fade as a result of normal wear and tear.

### INSTALLING THE SENSOR

Your brand new speed sensor is easy to install. To make it even easier for you, we recommend that you watch the video tutorial at [polar.com/en/polar\\_community/videos](http://polar.com/en/polar_community/videos).

1. Attach the rubber part to the sensor (picture 1).
2. Place the sensor on the front fork so that the POLAR logo faces outwards. Pass the cable ties over the sensor and rubber part. Don't tighten them fully yet. (Picture 2, A.)
3. Attach the magnet to a spoke at the same level as the sensor and tighten it lightly with a cross-head screwdriver. Don't tighten it fully yet. When the magnet passes the sensor, it should be pointing at the small caved dot on the backside of the sensor. (Picture 1, A.)
4. Fine-tune the position of the magnet and the sensor so that the magnet passes close to the sensor without actually touching it. Move the sensor as close to the wheel/ spokes as possible. The gap between the sensor and the magnet should be less than 4 mm/0.16". The gap is correct when you can fit a cable tie between the magnet and the sensor. (Picture 2.)
5. Rotate the front tire to test the sensor. The flashing red light on the sensor shows that you've positioned the magnet and the sensor right. You can now tighten the cable ties and cut off the ends. Also tighten the screw holding the magnet.

### GETTING STARTED

You can use your speed sensor with Polar products using *Bluetooth*® Smart. Check the compatible products and devices at [polar.com/support](http://polar.com/support).

To be able to see the speed and distance data, you need to pair the sensor with the app or the Polar product first. You also need to set the wheel size of your bike into the training device or app. For instructions, see the app manufacturer's manual or the user guide of your Polar product

Enjoy your ride!

### CARING FOR YOUR SPEED SENSOR

Clean the sensor with mild soap and water. Dry it with a towel. For more detailed caring instructions, see the full user manual at [polar.com/support](http://polar.com/support).

The battery can't be changed. To buy a new sensor, contact your authorized Polar Service or retailer. You can also buy sensors online. Go to [www.polar.com](http://www.polar.com) to find your own country's shoppolar online store. You can expect the battery to last about 3000 training hours.
