POLAR IGNITE USER MANUAL

This user manual helps you get started with your new watch. To see video tutorials and FAQs, go to support.polar.com/en/ignite.

INTRODUCTION

Congratulations on your new Polar Ignite!

Polar Ignite is a fitness watch that helps you become your true potential. It measures heart rate from the wrist with Polar’s Precision Prime™ sensor fusion technology and tracks speed, distance and route with GPS. Nightly Recharge™ measures your recovery every night, and the FitSpark™ training guide gives you personalized workout guidance based on your training history, fitness level and current recovery status. The new Sleep Plus Stages™ sleep tracking monitors your sleep stages (REM, light and deep sleep) and gives you sleep feedback and a numerical sleep score. Polar Ignite helps you relax and relieve stress with the Serene™ guided breathing exercise.

Nightly Recharge shows you how your body was able to recover from training and stress during the night. It combines automatically measured information on how well your autonomic nervous system (ANS) calmed down during the early hours of your sleep and how well you slept. Both components are formed by comparing your last night to your usual levels from the past 28 days. Your watch automatically measures both sleep charge and ANS charge during the night. You get personalized tips in the Polar Flow app for exercise, sleep and regulating energy levels.

The FitSpark™ training guide offers daily on-demand workouts easily available on your watch. The workouts are built to match your fitness level, training history and your recovery and readiness, based on your Nightly Recharge status from the previous night. FitSpark suggests 2-4 different workout options for you every day: one that suits you best and 1-3 other options to choose from. You get a maximum of four suggestions per day and there are 19 different workouts in total. Suggestions include workouts from cardio, strength and supportive training categories.

Sleep Plus Stages automatically tracks the amount and quality of your sleep and shows you how long you spent in each sleep stage. It gathers your sleep time and sleep quality components into one easily glanceable value, sleep score. Sleep score tells you how well you slept compared to the indicators of a good night’s sleep based on the current sleep science. Comparing the components of the sleep score to your own usual level help you recognize which aspects of your daily routine may affect your sleep and may need adjusting.

Serene™ breathing exercise is a stress management tool that helps you to relax your body and calm down your mind. It guides you towards slow diaphragmatic breathing that has proven health benefits. During the breathing exercise your watch gives you biofeedback on the harmony between your breathing and your heart’s beat-to-beat intervals. It tracks the time you spend in the serenity zones – the time when slow breathing has successfully driven your heart in a beneficial synchrony with the rhythm of your breathing.

With the changeable wristbands, you can personalize your watch to match every situation and style.

We are continuously developing our products for a better user experience. To keep your watch up to date and get the best performance, always make sure to update the firmware whenever a new version is available. The firmware updates enhance the functionality of your watch through improvements.
TAKE FULL ADVANTAGE OF YOUR POLAR IGNITE

Get connected to the Polar ecosystem and get the most out of your watch.

POLAR FLOW APP

Get the Polar Flow app from the App Store® or Google Play™. Sync your watch with the Flow app after training, and get an instant overview and feedback on your training results and performance. In the Flow app you can also see how active you've been during the day, how your body has recovered from training and stress during the night and how well you have slept. Based on the Nightly Recharge automatic overnight measurement and other parameters we have measured from you, you get personalized tips in the Flow app on exercise, and tips on sleep and regulating your energy levels on those particularly rough days.

POLAR FLOW WEB SERVICE

Sync your training data to the Polar Flow web service with the FlowSync software on your computer or via the Flow app. In the web service you can plan your training, track your achievements, get guidance and see a detailed analysis of your training results, activity and sleep. Let all your friends know about your achievements, find fellow exercisers and get motivation from your social training communities.

Find all this at flow.polar.com
GET STARTED

SETTING UP YOUR WATCH

To wake up and charge your watch, plug it into a powered USB port or a USB charger with the custom cable that came in the box. The cable magnetically snaps into place, just make sure to align the ledge on the cable with the slot on your watch (marked with red). Please note that it may take a while for the charging animation to appear on the display. We recommend that you charge the battery before you start using your watch. See Battery for detailed information on charging the battery.

To set up your watch, choose your language and preferred setup method. The watch gives you three options for setup: Browse to the option most convenient for you by swiping the display up or down. Tap the display to confirm your selection.

A. On your phone: Mobile setup is convenient if you don't have access to a computer with a USB port, but it might take longer. This method requires an internet connection.

B. On your computer: Wired computer setup is quicker and you can charge your watch at the same time, but you need a computer available. This method requires an internet connection.

The A and B options are recommended. You can fill in all the physical details required for accurate training data at once. You can also choose your language and get the latest firmware for your watch.

C. On your watch: If you don't have a compatible mobile device and can't get to a computer with an internet connection right away, you can start from the watch. Please note that when you do the setup from the watch, your watch is not yet connected with Polar Flow. It's important that you do the setup later via option A or B to get the latest firmware updates to your Ignite. In Flow you can also see a detailed analysis of your training, activity and sleep data.

OPTION A: SET UP WITH A PHONE AND POLAR FLOW APP

Please note that you have to do the pairing in the Flow app and NOT in your phone’s Bluetooth settings.

1. Keep your watch and phone close to each other during setup.
2. Make sure your phone is connected to the internet and turn on Bluetooth.
3. Download the Polar Flow app from the App Store or Google Play on your phone.
4. Open the Flow app on your phone.
5. The Flow app recognizes your watch nearby and prompts you to start pairing it. Tap the Start button on the Flow app.
6. When the Bluetooth Pairing Request confirmation message appears on your phone, check that the code shown on your phone matches the code shown on your watch.
7. Accept the Bluetooth pairing request on your phone.
8. Confirm the pin code on your watch by tapping the display.
9. Pairing done is displayed once the pairing is completed.
10. Sign in with your Polar account or create a new one. We'll walk you through the sign-up and setup within the app.

When you're done with the settings, tap Save and sync and your settings are synced to your watch.

If you're prompted to update the firmware, please plug your watch into a power source to ensure a flawless update operation, and then accept the update.

**OPTION B: SET UP WITH YOUR COMPUTER**

1. Go to flow.polar.com/start and download and then install the Polar FlowSync data transfer software onto your computer.
2. Sign in with your Polar account or create a new one. Plug your watch into your computer's USB port with the custom cable that came in the box. We'll walk you through the sign-up and setup within the Polar Flow web service.

**OPTION C: SET UP FROM THE WATCH**

Adjust the values by swiping the display and tap to confirm your selection. If you want to return and change a setting at any point, press BACK until you reach the setting you want to change.

Please note that when you do the setup from the watch, your watch is not yet connected with Polar Flow. Firmware updates for your watch are available only through Polar Flow. To make sure you get to enjoy your watch and the unique Polar features at their best, it's important that you do the setup later in the Polar Flow web service or with the Polar Flow mobile app by following the steps in option A or B.

**BUTTON FUNCTIONS AND TOUCH DISPLAY**

You watch has one button (BACK) that has different functionalities depending on the situation of use. See the table below to find out what functionalities the button has in different modes.

<table>
<thead>
<tr>
<th>Time view</th>
<th>Menu</th>
<th>Pre-training mode</th>
<th>During training</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enter the menu</td>
<td>Return to the previous level</td>
<td>Return to time view</td>
<td>Pause training by pressing once. Tap the display to continue.</td>
</tr>
<tr>
<td>Press and hold to start pairing</td>
<td>Leave settings unchanged</td>
<td>Illuminate the display</td>
<td>To stop the session, press and hold when paused.</td>
</tr>
<tr>
<td>Time view</td>
<td>Menu</td>
<td>Pre-training mode</td>
<td>During training</td>
</tr>
<tr>
<td>----------------------------</td>
<td>-------------------</td>
<td>-------------------</td>
<td>-----------------</td>
</tr>
<tr>
<td>Illuminate the display</td>
<td>Cancel selections</td>
<td>Illuminate the display</td>
<td></td>
</tr>
</tbody>
</table>

**COLOR TOUCH DISPLAY**

The color touch display lets you easily swipe between watch faces, through lists and menus, as well as choose items by tapping the display.

- Tap the display to confirm selections and choose items.
- Swipe up or down to scroll the menu.
- Swipe left or right during training to see different training views.
- Swipe left or right in time view to switch between the watch faces.
- Swipe down in time view to access the quick settings menu (screen lock, do not disturb, flight mode).
- Swipe up in time view to see notifications.
- Tap the display to see more detailed information.

To ensure proper function of the touch display wipe any dirt, sweat or water off the display with a cloth. The touch display won't respond properly when trying to use it while wearing gloves.

**VIEW NOTIFICATIONS**

View the notifications by swiping up from the bottom of the display or by turning your wrist to look at the watch immediately after the watch vibrates. The red dot at the bottom of the display indicates you have new notifications. For more information, see Phone notifications.

**BACKLIGHT ACTIVATION GESTURE**

The backlight is automatically switched on when you turn your wrist to look at the watch.

**WATCH FACES**

The Polar Ignite watch faces tell you a lot more than just the time. You'll get the most timely and relevant information right on the watch face, including your activity status, your heart rate, latest training sessions, Nightly recharge status and FitSpark on-demand training suggestions. You can scroll through the watch faces by swiping left or right and open a more detailed view by tapping the watch face.

You can choose between an analogue and a digital display in Watch settings.
Basic watch face with time and date.

Activity

The graph bar around the watch face and the percentage below the time and date show your progress towards your daily activity goal.

In addition, when opening the details, you can see the following details of your day's accumulated activity:

- Steps you've taken so far. The amount and type of body movements are registered and turned into an estimation of steps.
- Active time tells you the cumulative time of body movements that benefit your health.
- Calories you've burned through training, activity and BMR (Basal metabolic rate: the minimum metabolic activity required to maintain life).

For more information, see 24/7 Activity tracking.

Heart rate
When using the **Continuous heart rate** feature your watch continuously measures your heart rate and displays it on the Heart rate watch face.

When using the Continuous heart rate feature, you can also follow what are the highest and lowest heart rate readings of your day and you can check what your lowest heart rate reading was during the previous night. You can turn the Continuous heart rate feature on, off or to night-time only mode on your watch in **Settings > General settings > Continuous HR tracking**.

For more information, see [Continuous heart rate feature](#).

If you're not using the **Continuous heart rate** feature, you can still quickly check your current heart rate without starting a training session. Just tighten your wristband, choose this watch face and you'll see your current heart rate by tapping the display. Return to the Heart rate watch face by pressing BACK.
See the time passed since your latest training session and the sport of the session.

In addition, when opening the details, you can view the summaries of your training sessions from the last 14 days. Browse to the training session you want to view by swiping up/down, and then tap the display to open the summary. For more information, see Training summary.

Nightly Recharge watch face

When you wake up you can see your Nightly Recharge status. Nightly Recharge status tells you how restorative your last night was. Nightly Recharge combines information on how well your autonomic nervous system (ANS) calmed down during the early hours of your sleep (ANS charge) and how well you slept (sleep charge). Tap on ANS charge details or Sleep charge details for more information.

For more information, see Nightly Recharge™ recovery measurement or Sleep Plus Stages™ sleep tracking.

FitSpark watch face
Your watch suggests the most suitable training targets for you based on your training history, fitness level and current recovery status. Tap the watch face to see all the suggested training targets. Tap one of the suggested training targets to see detailed information about the training target.

For more information, see FitSpark daily training guide.

Note that the watch faces and their contents cannot be edited.

MENU

Enter the menu by pressing BACK and browse through the menu by swiping up or down. Confirm selections by tapping the display, and return with the BACK button.

Start training

From here you can start your training sessions. Tap the display to enter the pre-training mode and browse to the sport profile you want to use.

See Start a training session for detailed instructions.

Settings

You can edit the following settings on your watch:

- Physical settings
- General settings
- Watch settings

For more information, see Settings.
In addition to the settings available on your watch, you can edit Sport Profiles in the Polar Flow web service and app. Customize your watch with your favorite sports and the information you want to follow during your training sessions. See Sport Profiles in Flow for more information.

**Timers**

In **Timers** you'll find a stopwatch and a countdown timer.

**Stopwatch**

To start the stopwatch, tap first **Stopwatch** and then 🕒. To add a lap, tap the lap icon 🛑. To pause the stopwatch, press BACK.

**Countdown Timer**

You can set the countdown timer to count down from a preset time. Tap on **Set Timer**, and set the countdown time, and tap ✔️ to confirm. When completed, tap **Start** to start the countdown timer.

The countdown timer is added to the basic watch face.

At the end of the countdown, the watch notifies you by vibrating. Tap ✔️ to restart the timer, or tap ✔️ to cancel and return to the time view.

**During training you can use interval timer and countdown timer. Add the**
timer views to training views in the sport profile settings in Flow and sync the settings to your watch. For more information on using timers during training, see During training.

Serene guided breathing exercise

First, tap Serene and then tap Start exercise to start the breathing exercise.

For more information, see Serene™ guided breathing exercise.

Fitness Test

To perform the fitness test, first tap Fitness Test and then tap Relax and start the test.

For more information, see Fitness Test with wrist-based heart rate.

QUICK SETTINGS

Quick settings menu

Swipe down from the top of the screen to pull down the Quick settings menu. Swipe left or right to browse and tap to choose screen lock, do not disturb feature or flight mode:

- **Screen lock**: Tap the screen lock icon to switch screen lock on. Press the BACK button for 2 seconds to unlock the screen.
- **Do not disturb**: Tap the do not disturb icon to switch it on and tap again to switch it off. When do not disturb is switched on, you will not get any notifications or call alerts. Also, the backlight activation gesture is disabled.
- **Flight mode**: Tap the flight mode icon to switch it on and tap again to switch it off. Flight mode cuts off all wireless communication from your watch. You can still use it, but you can't sync your data with the Polar Flow mobile app or use it with any wireless accessories.

Battery status icon shows how much charge is left in the battery.

During training
• **Backlight**: Tap the Backlight icon to choose **Always on** or **Automatic**. With always on selected the watch display will be illuminated throughout your training session. The backlight setting will default back to automatic after you finish your training session. Please note that the always on selection will drain your battery much faster than the default setting.

• **Screen lock**: Tap the screen lock icon to switch screen lock on. Press the BACK button for 2 seconds to unlock the screen.

---

**PAIRING A PHONE WITH YOUR WATCH**

Before you can pair a phone with your watch, you need to setup your watch in the Polar Flow web service or with the Polar Flow mobile app as described in chapter Setting up your watch. If you did the setup for your watch with a phone, your watch has already been paired. If you did the setup with a computer and would like to use your watch with Polar Flow app, please pair your watch and phone as follows:

**BEFORE PAIRING A PHONE:**

- download Flow app from the App Store or Google Play
- make sure your phone has Bluetooth turned on, and airplane mode/flight mode is not turned on.
- **Android users**: make sure location is enabled for the Polar Flow app in the phone’s application settings.

**TO PAIR A PHONE:**

1. On your phone, open the Flow app and sign in with your Polar account, which you have created when setting up your watch.

   **Android users**: If you have several Flow app compatible Polar devices in use, make sure you have chosen Polar Ignite as the active device in the Flow app. This way the Flow app knows to connect to your watch. In the Flow app, go to Devices and choose Polar Ignite.

2. On your watch, press and hold BACK in time mode OR go to **Settings > General settings > Pair and sync > Pair and sync phone** and tap the display.
3. **Open Flow app and bring your watch close to phone** is displayed on your watch.
4. When the Bluetooth Pairing Request confirmation message appears on your phone, check that the code shown on your phone matches the code shown on your watch.
5. Accept the Bluetooth pairing request on your phone.
6. Confirm the pin code on your watch.
7. **Pairing done** is displayed once the pairing is completed.
DELETE A PAIRING

To delete a pairing with a phone:

1. Go to Settings > General settings > Pair and sync > Paired devices and tap the display.
2. Choose the device you want to remove by tapping its name on the display.
3. Remove pairing? is displayed. Confirm by tapping the display.
4. Pairing removed is displayed when you are done.

UPDATING THE FIRMWARE

To keep your watch up to date and to get the best performance, always make sure to update the firmware whenever a new version is available. Firmware updates are performed to improve the functionality of your watch.

You won’t lose any data due to the firmware update. Before the update begins, the data from your watch is synced to the Flow web service.

WITH PHONE OR TABLET

You can update the firmware with your phone if you’re using the Polar Flow mobile app to sync your training and activity data. The app will let you know if there’s an update available and will guide you through it. We recommend that you plug the watch into a power source before starting the update to ensure a flawless update operation.

The wireless firmware update may take up to 20 minutes, depending on your connection.

WITH COMPUTER

Whenever a new firmware version is available, FlowSync will notify you when you connect the watch to your computer. The firmware updates are downloaded via FlowSync.

To update the firmware:

1. Plug your watch into your computer with the custom cable that came in the box. Make sure that the cable snaps into place. Align the ledge on the cable with the slot on your watch (marked with red).
2. FlowSync starts syncing your data.
3. After syncing, you are asked to update the firmware.
4. Choose Yes. The New firmware is installed (this may take up to 10 minutes), and the watch restarts. Please wait until the firmware update has been finalized before you detach the watch from your computer.
SETTINGS

GENERAL SETTINGS

To view and edit your general settings, go to Settings > General settings.

In General settings you’ll find:

- Pair and sync
- Continuous HR tracking
- Flight mode
- Do not disturb
- Phone notifications
- Units
- Language
- Inactivity alert
- About your watch

PAIR AND SYNC

- Pair and sync phone/Pair sensor or other device: Pair sensors or phones with your watch. Sync data with the Flow app.
- Paired devices: View all the devices you have paired with your watch. These can include heart rate sensors and phones.

CONTINUOUS HR TRACKING

Turn the Continuous Heart Rate feature On, Off or Night-time only. For more information, see Continuous heart rate.

FLIGHT MODE

Choose On or Off.

Flight mode cuts off all wireless communication from your watch. You can still use it, but you can’t sync your data with the Polar Flow mobile app or use it with any wireless accessories.

DO NOT DISTURB

Turn the Do not disturb feature On, Off or On ( - ). Set the period when do not disturb is on. Choose when it Starts at and Ends at. When it is set on, you will not get any notifications or call alerts. Also, the backlight activation gesture is disabled.

PHONE NOTIFICATIONS

Set phone notifications Off or On, when not training. Note that you will not receive any notifications during training sessions.
UNITS

Choose metric (kg, cm) or imperial (lb, ft). Set the units used to measure weight, height, distance and speed.

LANGUAGE

You can choose the language you want to use on your watch. Your watch supports the following languages: Bahasa Indonesia, Čeština, Dansk, Deutsch, English, Español, Français, Italiano, Nederlands, Norsk, Polski, Português, Русский, Suomi, Svenska, 简体中文, 日本語 and Türkçe.

INACTIVITY ALERT

Set the inactivity alert On or Off.

ABOUT YOUR WATCH

Check the device ID of your watch, as well as the firmware version, HW model, A-GPS expiry date and the Polar Ignite-specific regulatory labels.

Restart your watch: If you experience problems with your watch, you can try restarting it. Restarting the watch will not delete any of the settings or your personal data from the watch. Tap the display to restart and tap again to confirm the restart. You can also restart your watch by pressing and holding the BACK button for 10 seconds.

PHYSICAL SETTINGS

To view and edit your physical settings, go to Settings > Physical settings. It is important that you are precise with the physical settings, especially when setting your weight, height, date of birth and sex, as they have an impact on the accuracy of the measuring values, such as the heart rate zone limits and calorie expenditure.

In Physical settings you’ll find:

- Weight
- Height
- Date of birth
- Sex
- Training background
- Activity goal
- Preferred sleep time
- Maximum heart rate
- Resting heart rate
- VO₂max

WEIGHT

Set your weight in kilograms (kg) or pounds (lbs).

HEIGHT

Set your height in centimeters (metric) or in feet and inches (imperial).
DATE OF BIRTH

Set your birthday. The order in which the date settings are depends on which time and date format you have chosen (24h: day - month - year/12h: month - day - year).

SEX

Select Male or Female.

TRAINING BACKGROUND

Training background is an assessment of your long-term physical activity level. Select the alternative that best describes the overall amount and intensity of your physical activity during the past three months.

- **Occasional (0-1h/week):** You do not participate regularly in programmed recreational sport or heavy physical activity, e.g. you walk only for pleasure or exercise hard enough to cause heavy breathing or perspiration only occasionally.
- **Regular (1-3h/week):** You participate regularly in recreational sports, e.g. you run 5-10 km or 3-6 miles per week or spend 1-3 hours per week in comparable physical activity, or your work requires modest physical activity.
- **Frequent (3-5h/week):** You participate at least 3 times a week in heavy physical exercise, e.g. you run 20-50 km/12-31 miles per week or spend 3-5 hours per week in comparable physical activity.
- **Heavy (5-8h/week):** You participate in heavy physical exercise at least 5 times a week, and you may sometimes take part in mass sports events.
- **Semi-pro (8-12h/week):** You participate in heavy physical exercise almost daily, and you exercise to improve performance for competitive purposes.
- **Pro (>12h/week):** You are an endurance athlete. You participate in heavy physical exercise to improve your performance for competitive purposes.

ACTIVITY GOAL

Daily activity goal is a good way to find out how active you really are in your everyday life. Choose your typical activity level from three options and see how active you need to be to reach your daily activity goal.

The time you need to complete your daily activity goal depends on the level you have chosen and the intensity of your activities. Age and gender also affect the intensity you need to reach your daily activity goal.

**Level 1**

If your day includes only a little sports and a lot of sitting, commuting by car or public transport and so on, we recommend you pick this activity level.

**Level 2**

If you spend most of your day on your feet, perhaps due to the type of work you do or your daily chores, this is the right activity level for you.

**Level 3**
If your work is physically demanding, you're into sports or otherwise tend to be on the move and active, this is the activity level for you.

**PREFERRED SLEEP TIME**

Set *your preferred sleep* time to define how long you aim to sleep every night. By default, it is set to the average recommendation for your age group (eight hours for adults from 18 to 64 years). If you feel that eight hours of sleep is too much or too little for you, we recommend you adjust your preferred sleep time to meet your individual needs. By doing this, you'll get accurate feedback on how much sleep you got in comparison to your preferred sleep time.

**MAXIMUM HEART RATE**

Set your maximum heart rate, if you know your current maximum heart rate value. Your age-predicted maximum heart rate value (220-age) is displayed as a default setting when you set this value for the first time.

\[ HR_{\text{max}} \]

is used to estimate energy expenditure. \( HR_{\text{max}} \) is the highest number of heartbeats per minute during maximum physical exertion. The most accurate method for determining your individual \( HR_{\text{max}} \) is to perform a maximal exercise stress test in a laboratory. \( HR_{\text{max}} \) is also crucial when determining training intensity. It is individual and depends on age and hereditary factors.

**RESTING HEART RATE**

Your resting heart rate is the lowest number of heartbeats per minute (bpm) when fully relaxed and without distractions. Your age, fitness level, genetics, health status and sex affect the resting heart rate. A typical value for an adult is 55–75 bpm, but your resting heart rate can be significantly lower than that, for example, if you're very fit.

It's best to measure your resting heart rate in the morning after a good night's sleep, right after you wake up. It's OK to go to the bathroom first if it helps you to relax. Don't do any strenuous training leading up to the measurement and make sure you're fully recovered from any activity. You should do the measurement more than once, preferably on consecutive mornings, and calculate your average resting heart rate.

**To measure your resting heart rate:**

1. Wear your watch. Lie down on your back and relax.
2. After about 1 minute, start a training session on your wearable. Choose any sport profile, for example Other indoor.
3. Lie still and breathe calmly for 3–5 minutes. Don't look at your training data during the measurement.
4. Stop the training session on your Polar device. Sync the wearable with the Polar Flow app or web service and check the training summary for the value of your lowest heart rate (HR min)—this is your resting heart rate. Update your resting heart rate to your physical settings in Polar Flow.

**\( VO_{2\text{max}} \)**

Set your \( VO_{2\text{max}} \).

\( VO_{2\text{max}} \) (maximal oxygen uptake, maximal aerobic power) is the maximal rate at which oxygen can be used by the body during maximal exercise; it is related directly to the maximal capacity of the heart to deliver blood to the muscles. \( VO_{2\text{max}} \) can be measured or predicted by fitness tests (e.g. maximal exercise tests and submaximal exercise
tests). You can also use your Running Index score, which is an estimation of your VO$_{2\text{max}}$. You can use the Polar Fitness Test with wrist-based heart rate feature to estimate your VO$_{2\text{max}}$ and update it to your physical settings.

**WATCH SETTINGS**

To view and edit your watch settings, go to **Settings > Watch settings**

In **Watch settings** you'll find:

- Alarm
- Watch face
- Time
- Date
- First day of week

**ALARM**

Set alarm repetition: **Off**, **Once, Monday to Friday** or **Every day**. If you choose **Once, Monday to Friday** or **Every day**, also set the time for the alarm.

<i>When the alarm is set on, a clock icon is displayed in the time view.</i>

**WATCH FACE**

Choose the watch face:

- Analog
- Digital

**TIME**

Set the time format: **24 h** or **12 h**. Then set the time of day.

<i>When syncing with the Flow app and web service, the time of day is automatically updated from the service.</i>

**DATE**

Set the date. Also set the **Date format**, you can choose **mm/dd/yyyy**, **dd/mm/yyyy**, **yyyy/mm/dd**, **dd-mm-yyyy**, **yyyy-mm-dd**, **dd.mm.yyyy** or **yyyy.mm.dd**.

<i>When syncing with the Flow app and web service, the date is automatically updated from the service.</i>
FIRST DAY OF WEEK

Choose the starting day of each week. Choose Monday, Saturday or Sunday.

When syncing with the Flow app and web service, the week’s starting day is automatically updated from the service.

RESTARTING AND RESETTING

If you experience problems with your watch, you can try restarting it. Restarting the watch will not delete any of the settings or your personal data from the watch.

TO RESTART THE WATCH

On your watch, press the BACK button, swipe up until you find Settings, navigate to Settings > General settings > About your watch > Restart your watch. First, tap Restart your watch and then tap ✅ to confirm the restart.

You can also restart your watch by pressing and holding the BACK button for 10 seconds.

TO RESET THE WATCH TO FACTORY SETTINGS

If restarting your watch didn’t help, you can reset the watch back to factory settings. Note that resetting the watch back to factory settings empties all personal data and settings from the watch, and you will need to set it up again for your personal use. All data that you have synced from your watch to your Flow account is safe.

1. Connect your watch to the computer’s USB port.
2. Open settings in FlowSync.
3. Press the Factory Reset button.

Now you need to set up your watch again, either via mobile or computer. Just remember to use the same Polar account in the setup you’ve used before resetting.
**TRAINING**

**WRIST-BASED HEART RATE MEASUREMENT**

Your watch measures your heart rate from the wrist with the **Polar Precision Prime™** sensor fusion technology. This new heart rate innovation combines optical heart rate measurement with skin contact measurement, ruling out any disturbances to the heart rate signal. It tracks your heart rate accurately even in the most demanding conditions and training sessions.

Although there are many subjective clues as to how your body is doing during exercise (perceived exertion, breathing rate, physical sensations), none of them are as reliable as measuring heart rate. It is objective and affected by both internal and external factors—meaning that you will have a dependable measure of your physical state.

**WEARING YOUR WATCH WHEN MEASURING HEART RATE FROM YOUR WRIST OR TRACKING YOUR SLEEP**

To measure wrist-based heart rate accurately during training, when using the **Continuous heart rate** and **Nightly Recharge** features or while tracking your sleep with **Sleep Plus Stages** make sure that you wear the watch correctly:

- Wear your watch on top of your wrist, at least a finger's width up from the wrist bone (see the picture below).
- Tighten the wristband firmly around your wrist. The sensor on the back must be in constant touch with your skin and the watch should not be able to move on your arm. A good way to check that the wristband is not too loose is if you push the wristband lightly up from both sides of your arm and make sure the sensor doesn't lift from your skin. When pushing the wristband up you shouldn't see the LED light shining from the sensor.
- For most accurate heart rate measurement, we advise you to wear your watch for a few minutes prior to starting the heart rate measurement. Also it's a good idea to warm up the skin if your hands and skin get cold easily. Get the blood going before starting your session!

![Wrist bone](image)

During training you should slide the Polar device further up from the wrist bone and wear the wristband a bit more tightly to try to minimize any extra moving of the device. Give your skin a few minutes to adapt to the Polar device before starting a training session. After the training session, loosen the wristband a bit.

If you have tattoos on the skin of your wrist, avoid placing the sensor right on them as they may prevent accurate readings.

In sports where it's more challenging to keep the sensor stationary on your wrist or where you have pressure or movement in muscles or tendons near the sensor, we recommend using a Polar heart rate sensor with a chest strap if you're looking for supreme accuracy in your training. Your watch is compatible with Bluetooth® heart rate sensors,
like Polar H10. The Polar H10 heart rate sensor is more responsive to rapidly increasing or decreasing heart rate, so it’s the ideal option also for interval type of training with quick sprints.

To maintain the best possible performance of the wrist-based heart rate measurement, keep your watch clean and prevent scratches. After a sweaty training session, we recommend that you wash the watch under running water with a mild soap and water solution. Then wipe it dry with a soft towel. Let it fully dry before charging.

WEARING YOUR WATCH WHEN NOT MEASURING HEART RATE FROM YOUR WRIST OR TRACKING YOUR SLEEP/NIGHTLY RECHARGE

Loosen the wristband a bit for a more comfortable fit and to let your skin breathe. Wear the watch just as you would wear a normal watch.

Every once in a while it’s a good idea to let your wrist have a breather, especially if you have sensitive skin. Take off your watch and recharge it. This way both your skin and your watch can have a rest, and be ready for your next training event.

START A TRAINING SESSION

1. **Wear your watch** and tighten the wristband.
2. To enter the pre-training mode press BACK to enter the main menu and tap **Start training**.

From the pre-training mode, you can access the quick menu by tapping the quick menu icon 🎨. The options displayed in the quick menu depend on the sport you have chosen and whether you are using GPS.

You can, for example, choose a favorite training target you want to perform and add timers to your training views. For more information, see **Quick menu**.

After your choice, the watch returns to the pre-training mode.

3. **Browse to your preferred sport**.
4. **Stay in the pre-training mode until the watch has found your heart rate and the GPS satellite signals (if applicable to your sport) to make sure your training data is accurate.** To catch GPS satellite signals, go outdoors and away from tall buildings and trees. Keep your watch still with the display upwards and avoid touching the watch during the GPS signal search.

If you have paired an optional Bluetooth sensor with your watch, the watch will automatically start searching for the sensor signal as well.
The circle around the GPS icon will turn green when the GPS is ready. The watch notifies you with a vibration.

The watch has found your heart rate when your heart rate is shown.

When you’re wearing a Polar heart rate sensor that’s paired with your watch, the watch automatically uses the connected sensor to measure your heart rate during training sessions. A blue circle around the heart rate symbol indicates that your watch uses the connected sensor to measure your heart rate.

5. When all signals are found, tap the display to start training recording.

See During Training for more information on what you can do with your watch during training.

**START A PLANNED TRAINING SESSION**

You can plan your training and create detailed training targets in the Polar Flow app or the Polar Flow web service and sync them to your watch.

To start a planned training session scheduled for the current day:

1. Enter the pre-training mode by first pressing the BACK button and then tapping on Start training.
2. You'll be prompted to start a training target you've scheduled for the day.

3. Tap ✔️ to view the target information.
4. Tap Start to return to pre-training mode, and choose the sport profile you want to use.
5. When the watch has found all the signals, tap the display. Recording started is displayed and you can start training.

Your watch will guide you towards completing your target during training. See During Training for more information.
Your planned training targets will also be included in the FitSpark training suggestions.

**QUICK MENU**

You can access the quick menu by tapping the quick menu icon from pre-training mode and during a session when paused.

The options displayed in the quick menu depend on the sport you have chosen and whether you are using GPS.

**Training suggestions:**

Training suggestions shows you the daily FitSpark training suggestions.

**Pool length:**

When using the Swimming/Pool swimming profile, it’s important that you choose the correct pool length, as it affects pace, distance and stroke calculation, as well as your SWOLF score. Tap Pool length to access the Pool length setting and change the previously set pool length if necessary. The default lengths are 25 meters, 50 meters and 25 yards, but you can also set it manually to a custom length. The minimum length that can be chosen is 20 meters/yards.

The pool length setting is only available in the pre-training mode from the quick menu.

**Favorites:**

In Favorites you’ll find training targets that you have saved as favorites in the Flow web service, and synced to your watch. Choose a favorite training target you want to perform. After your choice, the watch returns to the pre-training mode where you can start the training session.

For more information, see Favorites.

**Interval timer:**

You can set time and/or distance based interval timers to precisely time work and recovery phases in your interval training sessions.
To add interval timer to your training views for the session, choose Timer for this session > On. You can use a previously set timer or create a new timer by returning to the quick menu and choosing Interval timer > Set timers:

1. Choose Time-based or Distance-based: Time-based: Define minutes and seconds for the timer and tap ✔️. Distance-based: Set the distance for the timer and tap ✔️. Set another timer? is shown. To set another timer, tap ✔️.
2. When completed, the watch returns to pre-training mode where you can start the training session. The timer starts when you start the training session.

For more information, see During Training.

Countdown timer:

To add countdown timer to your training views for the session, choose Timer for this session > On. You can use a previously set timer or create a new timer by returning to the quick menu and choosing Countdown timer > Set timer. Set the countdown time, and tap ✔️ to confirm. When completed, the watch returns to pre-training mode where you can start the training session. The timer starts when you start the training session.

For more information, see During Training.

When you choose a training target for your session, the Favorites and Training suggestions options are crossed out in the quick menu. This is because you can only choose one target for the session. To change the target, choose the crossed out option and you will be asked if you want to change your target. Confirm another target by tapping ✔️.

**DURING TRAINING**

**BROWSE THE TRAINING VIEWS**

During training you can browse through the training views by swiping the display left or right. Note that the available training views and the information you see on the training views depend on the sport you’ve chosen and on any edits you’ve done to the chosen sport profile.

You can add sport profiles onto your watch and define the settings for each sport profile in the Polar Flow app and web service. You can create tailored training views for each sport you do and choose what data you want to follow during your sessions. For more information, see Sport profiles in Flow.

For example, your training views can have the following information:
Your heart rate and the heart rate ZonePointer

Distance

Duration

Pace/Speed

Your heart rate and the heart rate ZonePointer

Duration

Calories

Descent

Your current altitude

Ascent

Maximum heart rate

Heart rate graph and your current heart rate

Average heart rate

Time of day

Duration

**Backlight always on during training:** Swipe down from the top of the screen to pull down the **Quick settings** menu. Tap the Backlight icon to select **Always on** or **Automatic**. With always on selected the watch display will be illuminated throughout your training session. The backlight setting will default back to automatic after you finish your training session. Please note that the always on selection will drain your battery much faster than the default setting.
SET TIMERS

Before you can use timers during training, you need to add the timers to your training views. You can do this either by setting the timer view on for your current training session from the Quick menu or by adding the timers to the training views of the sport profile in the Flow web service sport profile settings and syncing the settings to your watch.

![Image of timer settings]

See Sport Profiles in Flow for more information.

INTERVAL TIMER

If you set the timer view on for your training session from the Quick menu, the timer starts when you start the training session. You can stop the timer and start a new timer as instructed below.

If you have added the timer in the training views of the sport profile you are using, you can start the timer as follows:

1. Browse to the Interval timer view and press and hold the display for 3 seconds. Tap Start to use a previously set timer or create a new timer in Set interval timer.
2. Choose Time-based or Distance-based: Time-based: Define minutes and seconds for the timer and tap ☑.
   Distance-based: Set the distance for the timer and tap ☑.
3. Set another timer? is shown. To set another timer, tap ☑.
4. When completed, tap Start to start the interval timer. At the end of each interval, the watch notifies you by vibrating.

To stop the timer, press and hold the display for 3 seconds and tap Stop timer.
If you set the timer view on for your training session from the Quick menu, the timer starts when you start the training session. You can stop the timer and start a new timer as instructed below.

If you have added the timer to the training views of the sport profile you are using, start the timer as follows:

1. Browse to the Countdown timer view and press and hold the display for 3 seconds.
2. Tap Start to use a previously set timer or choose Set countdown timer to set a new countdown time. When completed, tap Start to start the countdown timer.
3. At the end of the countdown, the watch notifies you by vibrating. If you want to restart the countdown timer, press and hold the display for 3 seconds and tap Start.

AUTOMATIC LAP SETTINGS

In sport profile settings in the Polar Flow app or web service, set Automatic lap to Lap distance or Lap duration. If you choose Lap distance, set the distance after which each lap is taken. If you choose Lap duration, set the duration after each lap is taken.

TRAINING WITH A TARGET

If you have created a quick training target based on duration, distance or calories in the Flow app or web service and synced it to your watch, you have the following training target view as the default first training view:

If you’ve created a target based on duration or distance, you can see how much of your target you still have remaining before you reach it.

OR

If you’ve created a target based on calories, you can see how many calories of your target you have left to burn.

If you have created a phased training target in the Flow app or web service and synced the target to your watch, you have the following training target view as the default first training view:
- Depending on the chosen intensity, you can see either your heart rate or speed/pace and the lower and upper heart rate or speed/pace limit of the current phase.
- Phase name and phase number/total number of phases
- Duration/distance covered so far
- Target duration/distance of the current phase

$i$ Your planned training targets will also be included in the FitSpark training suggestions.

$i$ See Planning your training for instructions on creating training targets.

CHANGE PHASE DURING A PHASED SESSION

The phase will change automatically when you have finished a phase. The watch notifies you by vibrating when the phase changes.

NOTIFICATIONS

If you are training outside the planned heart rate zones or speed/pace zones, your watch notifies you with a vibration.

PAUSING/STOPPING A TRAINING SESSION

Press BACK to pause your training session.

Tap on the sport icon to continue training. To stop the session, press and hold BACK. You'll get a summary of your training session on your watch right after you've stopped training.

$i$ If you stop your session after pausing, the time elapsed after pausing is not included in the total training time.

TRAINING SUMMARY AFTER TRAINING

You'll get a summary of your training session on your watch right after you've stopped training. Get a more detailed and illustrated analysis in the Polar Flow app or in the Polar Flow web service.
The information shown in your summary depends on the sport profile and data collected. For example, your training summary can include the following information:

- **Start time and date**
- **Duration of the session**
- **Distance covered in the session**

**Heart rate**

- Your average and maximum heart rate during the session.
- Your Cardio load from the session

**Heart rate zones**

- Training time spent in different heart rate zones

**Calories**

- Calories burned during the session
- Fat burn % of calories: Calories expended from fat during a workout expressed as a percentage of the total calories burned during the session

**Pace/Speed**

- Average and maximum pace/speed of the session
- Running Index: Your running performance class and numerical value. Find out more from chapter Running Index.

**Speed zones**

- Training time spent in different speed zones
Cadence

Your average and maximum cadence for the session

Running cadence is measured with a built-in accelerometer from your wrist movements.

Altitude

Maximum altitude during the session

Ascended meters/feet during the session

Descended meters/feet during the session

Automatic laps

Lap number

Best lap

Average lap

To view your training summaries later on your watch:

In time view, swipe left or right to navigate to the Latest training sessions watch face, and then tap on the display.

You can view the summaries of your training sessions from the last 14 days. Browse to the training session you want to view by swiping up or down and tap the training session to open the summary. Your watch can contain a maximum of 20 training summaries.
TRAINING DATA IN THE POLAR FLOW APP

Your watch syncs with the Polar Flow app automatically after you finish a training session if your phone is within the Bluetooth range. You can also sync your training data manually from the watch to the Flow app by pressing and holding the BACK button of your watch when you're signed in to the Flow app and your phone is within the Bluetooth range. In the app you can analyze your data at a glance after each session. The app allows you to see a quick overview of your training data.

For more information, see Polar Flow App.

TRAINING DATA IN THE POLAR FLOW WEB SERVICE

Analyze every detail of your training and learn more about your performance. Follow your progress and also share your best sessions with others.

For more information, see Polar Flow Web Service.
FEATURES

GPS

Your watch has built-in GPS that provides accurate speed, distance and altitude measurement for a range of outdoor sports, and allows you to see your route on map in the Flow app and web service after your session.

The watch uses Assisted GPS (A-GPS) to acquire a fast satellite fix. The A-GPS data tells your watch the predicted positions of the GPS satellites. This way the watch knows where to search for the satellites and thus is able to acquire signals from them within seconds, even under difficult signal conditions.

The A-GPS data updates once a day. The latest A-GPS data file is automatically updated to your watch each time you sync it with the Flow web service via FlowSync software or via the Flow app.

A-GPS EXPIRY DATE

The A-GPS data file is valid for up to 14 days. Positioning accuracy is relatively high during the first three days, and progressively decreases during the remaining days. Regular updates help to ensure a high level of positioning accuracy.

You can check the expiry date for the current A-GPS data file from your watch. Go to Settings > General settings > About your watch > Assisted GPS expires. If the data file has expired, sync your watch with the Flow web service via FlowSync software or with the Flow app to update A-GPS data.

Once the A-GPS data file has expired, more time may be required for acquiring your current position.

GPS FEATURES

Your watch includes the following GPS features:

- **Distance**: Accurate distance during and after your session.
- **Speed/Pace**: Accurate speed/pace information during and after your session.
- **Altitude, ascent and descent**: Real-time altitude measurement, as well as ascended and descended meters/feet.
- **Running index**: Running Index is based on heart rate and speed data measured during running. It gives information about your performance level, both aerobic fitness and running economy.
- **Route**: Available in Flow app and Flow web service.

For best GPS performance, wear the watch on your wrist with the display facing up. Due to the location of the GPS antenna on the watch, it is not recommended to wear it with the display on the underside of your wrist. When wearing it on the handlebars of a bike, make sure the display is facing up.

SMART COACHING

Whether it’s assessing your day-to-day fitness levels, creating individual training plans, working out at the right intensity or receiving instant feedback, Smart Coaching offers a choice of unique, easy-to-use features, personalized to your needs and designed for maximum enjoyment and motivation when training.
Your watch includes the following Polar Smart Coaching features:

- **Nightly Recharge™** recovery measurement
- **Sleep Plus Stages™** sleep tracking
- **FitSpark™** daily training guide
- **Serene™** guided breathing exercise
- **Fitness Test**
- **Running Program**
- **Running Index**
- **Training benefit**
- **Smart calories**
- **Continuous heart rate**
- **24/7 Activity tracking**
- **Activity Benefit**

**NIGHTLY RECHARGE™ RECOVERY MEASUREMENT**

**Nightly Recharge™** is an overnight recovery measurement that shows you how well you recover from the demands of your day. Your **Nightly Recharge status** is based on two components: how you slept (sleep charge) and how well your autonomic nervous system (ANS) calmed down during the early hours of your sleep (ANS charge). Both components are formed by comparing your last night to your usual levels from the past 28 days. Your watch automatically measures both sleep charge and ANS charge during the night.

You can see your Nightly Recharge status on your watch and in the Polar Flow app. Based on what we've measured from you, you get personalized daily tips in Polar Flow app on exercise, and tips on sleep and regulating your energy levels on those particularly rough days. Nightly Recharge helps you make optimal choices in your everyday life to maintain overall well-being and reach your training goals.

How to start using Nightly Recharge?

1. Wear your watch when you sleep. You need to wear your watch for **three nights** before you start to see the Nightly Recharge status on your watch.
2. Continuous heart rate tracking needs to be enabled for Nightly Recharge to function. To enable Continuous HR tracking go to **Settings > General Settings > Continuous HR tracking** and select **On** or **Night-time only**. Tighten the wristband firmly around your wrist. The sensor on the back must be in constant touch with your skin. For more detailed wearing instructions, see [Wrist-based heart rate measurement](#).
3. After three successful nightly measurements you will start to see your Nightly Recharge status on your watch.

Nightly Recharge on your watch

**Already awake?** is shown on the Nightly Recharge watch face when your watch has detected a minimum of four hours of sleep. Confirm by tapping ✓ and the watch summarizes your Nightly Recharge instantly. The Nightly Recharge status tells you how restorative last night was. Scores for both **ANS charge** and **sleep**...
**charge** are taken into account when calculating your Nightly Recharge status. Nightly Recharge status has the following scale: very poor – poor – compromised – OK – good – very good. In time view, swipe left or right to navigate to the Nightly Recharge watch face.

Tap the Nightly Recharge watch face to see further information about your **ANS charge** and your **sleep charge**.
1. **Nightly Recharge status graph**
3. **ANS charge graph**
4. **ANS charge** The scale is from -10 to +10. Around zero is your usual level.
6. **Heart rate bpm** (4 h average)
7. **Beat-to-beat interval** ms (4 h average)
8. **Heart rate variability** ms (4 h average)
9. **Breathing rate** br./min (4 h average)
10. **Sleep score graph**
11. **Sleep score** (1 - 100) A score that summarizes your sleep time and sleep quality into a single number.
12. **Sleep charge status** = Sleep score compared to your usual level. Scale: much below usual – below usual – usual – above usual – much above usual.
13. **Sleep data details.** See “Sleep data on your watch” on page 50 for more detailed information.

**Nightly Recharge in the Flow app**

You can compare and analyze your Nightly Recharge details from different nights in the Polar Flow app. Choose **Nightly Recharge** from the Flow app menu to see the details of your last night’s Nightly Recharge. Swipe the display right to see the Nightly Recharge details for previous days. Tap the **ANS charge** or **sleep charge** box to open detailed view of ANS charge or sleep charge.
ANS charge details in the Flow app

**ANS charge** gives you information on how well your autonomic nervous system (ANS) calmed down during the night. The scale is from -10 to +10. Around zero is your usual level. The ANS charge is formed by measuring your heart rate, heart rate variability and breathing rate during roughly the first four hours of sleep.

A normal heart rate value for adults can range between 40 and 100 bpm. It is common for your heart rate values to vary between nights. Mental or physical stress, exercising late at night, illness, or alcohol can keep your heart rate up during the early hours of your sleep. It’s best to compare your last night’s value to your usual level.

**Heart rate variability (HRV)** refers to the variation between successive heart beats. In general, high heart rate variability is linked to general good health, high cardiovascular fitness and resilience to stress. It can vary greatly from person to person, ranging from 20 to 150. It’s best to compare your last night’s value to your usual level.

**Breathing rate** shows your average breathing rate during roughly the first four hours of sleep. It is calculated from your beat-to-beat interval data. Your beat-to-beat intervals shorten when you breathe in and lengthen when you breathe out. During sleep, breathing rate slows down and varies mainly along with sleep stages. Typical values for a healthy adult at rest range from 12 to 20 breaths per minute. Higher values than usual may indicate a fever or impending illness.
Sleep charge details in Polar Flow

For sleep charge information in the Polar Flow app, see “Sleep data in the Flow app and web service” on page 52.

Personalized tips in the Flow app

Based on what we've measured from you, you get personalized daily tips in the Polar Flow app on exercise, and tips on sleep and regulating your energy levels on those particularly rough days. Tips for the day are displayed on the opening view of Nightly Recharge in the Flow app.

For exercise

You get an exercise tip every day. It tells you if you should take it easy or go for it. The tips are based on:

- Nightly Recharge status
- ANS charge
- Sleep charge
- Cardio load status

For more detailed workout suggestions, check out the FitSpark™ daily training guide!

For sleep

If you didn't sleep as well as usual, you get a sleep tip. It tells you how to improve the aspects of your sleep that weren't as good as usual. Besides parameters we measure from your sleep, we take into account:

- sleep rhythm over a longer period of time
- Cardio load status
- exercise on the previous day

For regulating energy levels

If your ANS charge status or sleep charge is particularly low, you get a tip that helps you get through the days with a lower recharge. They are practical tips on how to calm down when you're in overdrive, and how to energize when you need a boost.
Learn more about the Nightly Recharge in this in-depth guide.

SLEEP PLUS STAGES™ SLEEP TRACKING

Sleep Plus Stages automatically tracks the amount and quality of your sleep and shows you how long you spent in each sleep stage. It gathers your sleep time and sleep quality components into one easily glanceable value, sleep score. Sleep score tells you how well you slept compared to the indicators of a good night’s sleep based on the current sleep science.

Comparing the components of the sleep score to your own usual level help you recognize which aspects of your daily routine may affect your sleep and may need adjusting. Nightly breakdowns of your sleep are available on your watch and in the Polar Flow app. Long-term sleep data in the Polar Flow web service helps you analyze your sleep patterns in detail.

How to start tracking your sleep with Polar Sleep Plus Stages™

1. The first thing you need to do is set your preferred sleep time in the Polar Flow or on your watch. In the Flow app, tap your profile, and choose Your preferred sleep time. Choose your preferred time and tap Done. Or sign into your Flow account or create a new one at flow.polar.com, and choose Settings > Physical settings > Your preferred sleep time. Set your preferred time and choose Save. Set your preferred sleep time on your watch from Settings > Physical settings > Your preferred sleep time.
**Sleep time preference** is the amount of sleep you want to get each night. By default, it is set to the average recommendation for your age group (eight hours for adults from 18 to 64 years). If you feel that eight hours of sleep is too much or too little for you, we recommend you adjust your preferred sleep time to meet your individual needs. By doing this, you’ll get accurate feedback on how much sleep you got in comparison to your preferred sleep time.

2. Continuous heart rate tracking needs to be enabled for Sleep Plus Stages to function. To enable Continuous HR tracking go to **Settings > General Settings > Continuous HR tracking** and select **On** or **Night-time only**. Tighten the wristband firmly around your wrist. The sensor on the back of the watch must be in constant touch with your skin. For more detailed wearing instructions, see [Wrist-based heart rate measurement](#).

3. Your watch detects when you fall asleep, when you wake up and how long you spent sleeping. The Sleep Plus Stages measurement is based on recording the movements of your non-dominant hand with a built-in 3D acceleration sensor and recording your heart’s beat-to-beat interval data from your wrist with an optical heart rate sensor.

4. In the morning you can see your **sleep score (1-100)** from your watch. You get sleep stages information (light sleep, deep sleep, REM sleep) and a sleep score after one night, including feedback on sleep themes (amount, solidity and regeneration). After the third night, you get a comparison to your usual level.

5. You can record your own perception of your sleep quality in the morning by rating it on your watch or in the Flow app. Your own rating is not taken into account in the sleep charge calculation, but you can record your own perception and compare it to the sleep charge assessment you get.

**Sleep data on your watch**
When you wake up you can access your sleep details via the **Nightly Recharge** watch face. Tap the display to open the Nightly recharge status details and then tap **Open** under **Sleep charge details**.

You can also stop the sleep tracking manually. **Already awake?** is shown on the sleep watch face when your watch has detected a minimum of four hours of sleep. Tap the **Already awake?** text to tell the watch that you’re awake and it will ask you if you want to stop sleep tracking. Confirm by tapping **✓** and the watch summarizes your sleep instantly.

The sleep charge details view displays the following information:

1. **Sleep score status graph**
2. **Sleep score (1-100)** A score that summarizes your sleep time and sleep quality into a single number.
3. **Sleep charge** = Sleep score compared to your usual level. Scale: much below usual – below usual – usual – above usual – much above usual.
4. **Sleep time** tells you the total duration between when you fell asleep and when you woke up.
5. **Actual sleep (%)** tells the time spent asleep between the time you fell asleep and when you woke up. More specifically, it is your sleep time minus the interruptions. Only the time you actually spend asleep is included in actual sleep.
6. **Continuity (1-5)**: Sleep continuity is a rating of how continuous your sleep time was. Sleep continuity is evaluated on a scale from one to five: fragmented – fairly fragmented – fairly continuous – continuous – very continuous.
7. **Long interruptions (min)** tells the time you spent awake during the interruptions longer than one minute. During a normal night’s sleep there are numerous short and long interruptions when you actually awaken from your sleep. Whether you remember these interruptions or not depends on their duration. The shorter ones we don't usually remember. The longer ones, for instance when one might get up for a sip of water, we can remember. Interruptions are illustrated as yellow bars on your sleep timeline.
8. **Sleep cycles**: A normal sleeper typically goes through 4-5 sleep cycles over the course of a night. This equals to a sleep time of approximately 8 hours.
9. **REM sleep %**: REM stands for rapid eye movement. REM sleep is also called paradoxical sleep as your brain is active but your muscles are inactive to avoid acting out dreams. Just as deep sleep restores your body, REM sleep restores your mind, and enhances memory and learning.
10. **Deep sleep %**: Deep sleep is the stage of sleep in which it is hard to be awakened since your body is less responsive to environmental stimuli. Most deep sleep occurs during the first half of the night. This sleep stage restores your body and supports your immune system. It also affects certain aspects of memory and learning. The stage of deep sleep is also called slow wave sleep.

11. **Light sleep %**: Light sleep serves as a transition stage between wakefulness and the deeper stages of sleep. You can be easily awakened from light sleep since your responsiveness to the environmental stimuli remains quite high. Light sleep also promotes mental and physical recovery, although REM and deep sleep are the most important sleep stages in that regard.

**Sleep data in the Flow app and web service**

How you sleep is always individual — instead of comparing your sleep stats to others, follow your own long-term sleeping patterns to get a full understanding of how you sleep. Sync your watch with the Flow app after waking up to see your last night’s sleep data in Polar Flow. Follow your sleep on a daily and weekly basis in the Flow app, and see how your sleeping habits and activity during the day affect your sleep.

Choose **Sleep** from the Flow app menu to see your sleep data. In the Sleep structure view you see how your sleep has progressed through different sleep stages (light sleep, deep sleep and REM sleep) and any interruptions to your sleep. Usually sleep cycles proceed from light sleep into deep sleep and then to REM sleep. Typically, a night’s sleep consists of 4 to 5 sleep cycles. This equals to approximately 8 hours of sleep. During a normal night’s sleep there are numerous short and long interruptions. The long interruptions are displayed with the tall orange bars in the sleep structure graph.
The six components of the sleep score are grouped under three themes: amount (sleep time), solidity (long interruptions, continuity and actual sleep) and regeneration (REM sleep and deep sleep). Each bar in the graph represents the score for each component. Sleep score is the average of these scores. By choosing the weekly view you can see how your sleep score and sleep quality (solidity and regeneration themes) vary during the week.

The Sleep rhythm section provides a weekly view of your sleep time and sleep stages.
To view your long-term sleep data with sleep stages in the Flow web service go to Progress, and choose the Sleep report tab.

Sleep report gives you a long-term view to your sleep patterns. You can choose to view your sleep details for a 1-month, 3-month or 6-month period. You're able to see averages for the following sleep data: fell asleep, woke up, sleep time, REM sleep, deep sleep and interruptions to your sleep. You can view a nightly breakdown of your sleep data by hovering your mouse over the sleep graph.
FITSPARK™ DAILY TRAINING GUIDE

The FitSpark™ training guide offers ready-made daily on-demand workouts available easily right on your watch. The workouts are built to match your fitness level, training history and your recovery and readiness, based on your Nightly Recharge status from the previous night. FitSpark gives you 2-4 different workout options every day: one that suits you best and 1-3 other options to choose from. You get a maximum of four suggestions per day and there are 19 different workouts in total. Suggestions include workouts from the cardio, strength and supportive training categories.

FitSpark workouts are ready-made training targets defined by Polar. The workouts include instructions on how to perform the exercises and real-time step-by-step guidance to ensure you exercise safely and with proper technique. All workouts are time-based, and they are adjusted based on your current fitness level, making the sessions suitable for everyone, regardless of fitness level. The FitSpark workout suggestions are updated after each training session (including training sessions done without FitSpark), at midnight and when you wake up. FitSpark keeps your training versatile with different types of daily workouts to choose from.

How is your fitness level determined?

Your fitness level is determined for every workout suggestion based on your:

- Training history (average weekly heart rate zone realization from the previous 28 days)
- VO2max (from the Fitness test on your watch)
- Training background

You can start using the feature without any training history. However, FitSpark will work optimally after 7 days of use.

The higher the fitness level is, the longer the durations of the training targets are. The most demanding strength targets are not available at low fitness levels.

What type of exercises are included in the training categories?

In cardio sessions you're guided to train in different heart rate zones for different durations. Sessions include time-based warm-up, work and cool-down phases. Cardio sessions can be completed with any sport profile on your watch.

Strength sessions are circuit training type workouts consisting of strength training exercises with time-based guidance. Bodyweight workouts can be done using your own body as resistance - there is no need for additional weights. In circuit training workouts you need a bumper plate, a kettlebell or dumbbells to perform the exercises.

Supportive sessions are circuit training type workouts consisting of strength and mobility exercises with time-based guidance.

FitSpark on your watch

In time view, swipe left or right to navigate to the FitSpark watch face.
The **Fitspark** watch face includes the following views for different training categories:

![FitSpark watch face](image)

**PROGRAM WATCH FACE:** If you have an active Running Program in Polar Flow your FitSpark suggestions are based on the Running Program training targets.

Tap the FitSpark watch face to see the most suitable workout for you based on your training history and fitness level. Tap the suggested workout to see detailed breakdown of the workout or tap **More** to see other optional workout suggestions. Swipe up to see the exercises included in the workout (strength and supportive workouts) and tap the individual exercise to see detailed instructions on how to perform the exercise. Tap **Start** to select the training target. Tap the sport profile to start the training target.
During training

Your watch gives you guidance during training, which includes training information, time-based phases with heart rate zones for cardio targets and time-based phases with exercises for strength and supportive targets.

Strength training and supportive training sessions are based on ready-made workout plans with exercise animations and real-time step-by-step guidance. All sessions include timers and vibrations that let you know when it’s time to switch to the next phase. Continue each movement for 40 seconds, then rest until the minute is full and start the next movement. When you've completed all rounds of the first set, start the next set manually. You can end a training session any time you like. You cannot skip or re-arrange training phases.

Backlight always on during training: Swipe down from the top of the display to pull down the Quick settings menu. Tap the Backlight icon to select Always on or Automatic. With always on the watch display will be illuminated throughout your training session. The backlight setting will default back to automatic after you finish your training session. Please note that selecting always on will drain your battery much faster than the default setting.

Training results on your watch and in Polar Flow

You'll get a summary of your training session on your watch right after you've finished the session. You'll get a more detailed analysis in the Polar Flow app or in the Polar Flow web service. For cardio training targets you get a basic training result, which shows the phases of the session with heart rate data. For strength and supportive training targets you get detailed training results, which include your average heart rate and time spent on each exercise. These are displayed as a list, and each exercise is also displayed on the heart rate
Training may include some risk. Before beginning a regular training program please read the Minimizing risks when training guidance.

SERENE™ GUIDED BREATHING EXERCISE

Serene™ is a guided deep breathing exercise that helps you relax your body and mind and manage stress. Serene guides you to breathe at a slow, regular rhythm – six breaths per minute, which is the optimal breathing rate for stress-relieving effects. When you breathe slowly, your heart beat starts to synchronize with the rhythm of your breathing and your heart's beat-to-beat intervals start to vary more.

During the breathing exercise your watch helps you maintain a regular slow breathing rhythm with an animation on the watch display and by vibrating. Serene measures your body's response to the exercise and gives you real-time biofeedback on how you're doing. After the exercise, you get a summary of the time you spent on the three serenity zones. The higher the zone, the better the synchronization with the optimal rhythm was. The more time you spend in the higher zones, the more benefits you can expect to feel in the long-term. When you use the Serene breathing
First, it's important to mention that regular exercise can help you manage stress, improve the quality of your sleep, and give you a sense of improved overall well-being.

Serene breathing exercise on your watch

The Serene breathing exercise guides you to breathe deeply and slowly to calm down the body and mind. When you breathe slowly, your heart beat starts to synchronize with the rhythm of your breathing. Your heart’s beat-to-beat intervals vary more when your breathing is deeper and slower. Deep breathing produces measurable responses in the heart’s beat-to-beat intervals. When you breath in, intervals between consecutive heart beats shorten (heart rate speeds up) and when you breath out, intervals between consecutive heart beats lengthen (heart rate slows down). The variance of your heart’s beat-to-beat intervals is greatest when you are closest to the 6 breathing cycles per minute rhythm (inhale + exhale = 10 seconds). This is the optimal rate for stress-relieving effects. This is why your success is measured not only from the synchronization, but also from how close you were to the optimal breathing rate.

The default duration of Serene breathing exercise is 3 minutes. You can adjust the duration of the breathing exercise in range between 2-20 minutes. You can also adjust inhale and exhale durations if needed. Fastest breathing frequency can be 3 seconds for inhale and 3 seconds for exhale resulting 10 breaths per minute. Slowest breathing frequency is 5 seconds for inhale and 7 seconds for exhale resulting 5 breaths per minute.

Check that your position allows you to keep your arms relaxed and your hands still throughout the entire breathing exercise. This allows you to relax properly and ensures that your Polar watch can accurately measure the effects of the session.

1. Wear your watch snugly just behind the wrist bone.
2. Sit or lie down comfortably.
3. Press the BACK button to enter the main menu and swipe up to find Serene breathing exercise.
4. First tap Serene and then tap Start exercise to start breathing exercise. Exercise starts with a 15 seconds preparatory phase.
5. Follow the breathing guidance on the display or through the vibration.
6. You can end the exercise by pressing BACK button at any time.
7. The main guiding element in the animation changes color according to which serenity zone you’re currently in.
8. After the exercise, you’ll see your results displayed on your watch as time spent in the different serenity zones.
The **serenity zones** are Amethyst, Sapphire and Diamond. The serenity zones tell you how well your heartbeat and breathing are in sync and how close you are to the optimal breathing rate of six breaths per minute. The higher the zone, the better the synchronization with the optimal rhythm. For the highest serenity zone, Diamond, you need to sustain a slow target rhythm of around six breaths per minute, or slower. The more time you spend in the higher zones, the more benefits you can expect to feel in the long-term.

Breathing exercise result

After the exercise, you get a summary of the time you spent on the three serenity zones.

Learn more about the Serene™ guided breathing exercise in this [in-depth guide](#).

**FITNESS TEST WITH WRIST-BASED HEART RATE**

The Polar Fitness Test with wrist-based heart rate is an easy, safe and quick way to estimate your aerobic (cardiovascular) fitness at rest. The result, Polar OwnIndex, is comparable to maximal oxygen uptake (VO₂max), which
is commonly used to evaluate aerobic fitness. Your long-term training background, heart rate, heart rate variability at rest, sex, age, height, and body weight all influence OwnIndex. The Polar Fitness Test is developed for use by healthy adults.

Aerobic fitness relates to how well your cardiovascular system works to transport oxygen to your body. The better your aerobic fitness, the stronger and more efficient your heart is. Good aerobic fitness has many health benefits. For example, it helps in decreasing the risk of high blood pressure and your risk of cardiovascular diseases and stroke. If you want to improve your aerobic fitness it takes, on average, six weeks of regular training to see a noticeable change in your OwnIndex. Less fit individuals see progress even more rapidly. The better your aerobic fitness, the smaller the improvements in your OwnIndex.

Aerobic fitness is best improved by training types that use large muscle groups. Such activities include running, cycling, walking, rowing, swimming, skating, and cross-country skiing. To monitor your progress, start by measuring your OwnIndex a couple of times during the first two weeks in order to get a baseline value, and then repeat the test approximately once a month.

To make sure the test results are reliable, the following basic requirements apply:

- You can perform the test anywhere - at home, at the office, at a health club - provided the testing environment is peaceful. There should be no disturbing noises (e.g. television, radio, or telephone) and no other people talking to you.
- Always take the test in the same environment and at the same hour.
- Avoid eating a heavy meal or smoking 2-3 hours prior to testing.
- Avoid heavy physical exertion, alcohol, and pharmaceutical stimulants on the test day and the previous day.
- You should be relaxed and calm. Lie down and relax for 1-3 minutes before starting the test.

BEFORE THE TEST

Before starting the test, make sure your physical settings including training background are accurate in Settings > Physical settings.

Wear your Ignite snugly on top of your wrist, just behind the wrist bone. The heart rate sensor on the back of your Ignite must be in constant touch with your skin, but the wristband should not be too tight to prevent blood flow.

PERFORMING THE TEST

To perform the fitness test, press the BACK button and swipe up to find Fitness Test. First, tap Fitness Test and then on Relax and start the test.

- When heart rate is found, your current heart rate and Lie down & relax is shown on the display. Stay relaxed and limit body movements and communication with other people.
- You can interrupt the test in any phase by pressing BACK. Test canceled is shown.

If Ignite cannot receive your heart rate signal, the message Test failed is shown. In which case, you should check that the heart rate sensor on the back of the watch is in constant touch with your skin. See Wrist-based heart rate measurement for detailed instructions on wearing your Ignite when measuring heart rate from your wrist.
TEST RESULTS

When the test is over, your Ignite notifies you by vibrating and shows a description of your fitness test result and your estimated \(\text{VO}_2\text{max}\).

**Update to \(\text{VO}_2\text{max}\) to physical settings?** is shown.

- Tap \(\checkmark\) to save the value to your Physical settings.
- Tap \(\times\) to cancel only if you know your recently measured \(\text{VO}_2\text{max}\) value, and if it differs more than one fitness level class from the result.

Your latest test result is shown in Tests > Fitness test > Latest result. Only your most recently performed test result is shown.

For a visual analysis of your Fitness test results, go to the Flow web service and select the test from your Diary to view details from it.

Your Ignite syncs with the Flow app automatically after the test if your phone is within the Bluetooth range.

The classification is based on a literature review of 62 studies where VO$_{2\text{max}}$ was measured directly in healthy adult subjects in the USA, Canada and 7 European countries. Reference: Shvartz E, Reibold RC. Aerobic fitness norms for males and females aged 6 to 75 years: a review. Aviat Space Environ Med; 61:3-11, 1990.

VO$_{2\text{max}}$

A clear link exists between maximal oxygen consumption (VO$_{2\text{max}}$) of the body and cardiorespiratory fitness because oxygen delivery to tissues is dependent on lung and heart function. VO$_{2\text{max}}$ (maximal oxygen uptake, maximal aerobic power) is the maximal rate at which oxygen can be used by the body during maximal exercise; it is related directly to the maximal capacity of the heart to deliver blood to the muscles. VO$_{2\text{max}}$ can be measured or predicted by fitness tests (e.g. maximal exercise tests, submaximal exercise tests, Polar Fitness Test). VO$_{2\text{max}}$ is a good index of cardiorespiratory fitness and a good predictor of performance capability in endurance events such as distance running, cycling, cross-country skiing, and swimming.

VO$_{2\text{max}}$ can be expressed either as milliliters per minute (ml/min = ml kg$^{-1}$ min$^{-1}$) or this value can be divided by the person's body weight in kilograms (ml/kg/min = ml kg$^{-1}$ min$^{-1}$).

TRAINING LOAD PRO™

The Training Load Pro™ feature measures how your training sessions strain your body and helps to understand how it impacts your performance. The Training Load Pro gives you a training load level for your cardiovascular system Cardio load, and with Perceived load you can rate how strained you feel. When you know how strained each body system is, you can optimize your training by working the right system at the right time.

Cardio load

Cardio load is based on training impulse calculation (TRIMP), a commonly accepted and scientifically proven method to quantify training load. Your Cardio load value tells you how much strain your training session put on your cardiovascular system. The higher the Cardio load, the more strenuous the training session was for the cardiovascular system. Cardio load is calculated after every workout from your heart rate data and session duration.

Perceived load

Your subjective feeling is one useful method of estimating training load for all sports. The Perceived load is a value that takes into account your own subjective experience of how demanding your training session was and the duration of your session. It's is quantified with Rate of Perceived Exertion (RPE), a scientifically accepted method to quantify
subjective training load. Using the RPE scale is especially useful for sports where measuring training load based on heart rate alone has its limitations, for example strength training.

RATE YOUR SESSION IN THE FLOW MOBILE APP TO GET YOUR **PERCEIVED LOAD** FOR THE SESSION. YOU CAN CHOOSE FROM A SCALE FROM 1-10, IN WHICH 1 IS VERY, VERY EASY AND 10 IS MAXIMUM EFFORT.

**TRAINING LOAD FROM A SINGLE SESSION**

Your training load from a single session is shown in the summary of your training session on your watch, in the Flow app and in the Flow web service.

You'll get an absolute training load number for each measured load. The higher the load, the more strain it caused to your body. In addition, you can see a visual bullet scale interpretation and a verbal description of how hard your training load from the session was compared to your 90 days training load average.

The scale of bullets and verbal descriptions adapts according to your progress: the smarter you train, the higher loads you tolerate. As your fitness and tolerance for training improves, a training load that was ranked worth 3 bullets (Medium) a couple of months ago, could rank for only 2 bullets (Low) later on. This adaptive scale reflects the fact that the same kind of training session can have a different impact on your body depending on your current condition.

**STRAIN AND TOLERANCE**

In addition to the Cardio load from individual training sessions, the new Training Load Pro feature measures your short term Cardio load (Strain) and long term Cardio load (Tolerance).

**Strain** shows you how much you have strained yourself with training lately. It shows your average daily load from the past 7 days.
**Tolerance** describes how prepared you are to endure cardio training. It shows your average daily load from the past 28 days. To improve your tolerance for cardio training, you need to slowly increase your training over a longer period of time.

**CARDIO LOAD STATUS**

Cardio load status looks at the relation between your Strain and Tolerance and based on that shows you whether you are in a detraining, maintaining, productive or overreaching Cardio load status. Cardio load status guides you in evaluating the impact your training has on your body and how it affects your progress. Knowing how your past training affects your performance today allows you to keep your total training volume in control and optimize the timing of training at different intensities. Seeing how your training status changes after a session helps you understand how much load was caused by the session.

**LONG TERM ANALYSIS IN THE FLOW WEB SERVICE**

In the Flow web service you can follow how your Cardio load builds up over time and see how your Cardio loads have varied over the past week or months.

To view your Cardio load status and Cardio load buildup in the Flow web service, go to Progress > Cardio Load report.

![Cardio load report](image)

**Cardio load status**

- **Overreaching** (Load much higher than usual):
- **Productive** (Load slowly increasing)
- **Maintaining** (Load slightly lower than usual)
Detraining (Load way lower than usual)

The red bars illustrate the cardio load from your training sessions. The higher the bar, the harder the session was on your cardio system.

The background colors show how hard a session was compared to your session average from the past 90 days, just like the scale of five bullets and verbal descriptions (Very low, Low, Medium, High, Very high).

**Strain** shows how much you have strained yourself with training lately. It shows your average daily cardio load from the past 7 days.

**Tolerance** describes how prepared you are to endure cardio training. It shows your average daily cardio load from the past 28 days. To improve your tolerance for cardio training, slowly increase your training over a longer period of time.

**POLAR RUNNING PROGRAM**

Polar Running program is a personalized program based on your fitness level, designed to make sure that you train right and avoid overreaching. It's intelligent, and adapts based on your development, and lets you know when it might be a good idea to cut back a little and when to step it up a notch. Each program is tailored for your event, taking your personal attributes, training background and preparation time into account. The program is free, and available in the Polar Flow web service at flow.polar.com.

Programs are available for 5k, 10k, half marathon and marathon events. Each program has three phases: Base building, Build-up and Tapering. These phases are designed to gradually develop your performance, and make sure you're ready on race day. Running training sessions are divided into five types: easy jog, medium run, long run, tempo run and interval. All sessions include warm-up, work, and cool-down phases for optimal results. In addition, you can choose to do strength, core, and mobility exercises to support your development. Each training week consists of two to five running sessions, and the total running training session duration per week varies from one to seven hours depending on your fitness level. The minimum duration for a program is 9 weeks, and the maximum is 20 months.

Learn more about the Polar Running Program in this in-depth guide. Or read more about how to get started with the Running Program.

To see a video, click on one of the following links:

Get Started

How to use

**CREATE A POLAR RUNNING PROGRAM**

1. Log into the Flow web service at flow.polar.com.
2. Choose **Programs** from the Tab.
3. Choose your event, name it, set the event date, and when you wish to start the program.
4. Fill in the physical activity level questions.*
5. Choose if you want to include supporting exercises in the program.
6. Read and fill in the physical activity readiness questionnaire.
7. Review your program, and adjust any settings if necessary.
8. When you're done, choose **Start program**.

*If four weeks of training history is available, these will be pre-filled.
START A RUNNING TARGET

Before starting a session, make sure you've synced your training session target to your device. The sessions are synced to your device as training targets.

To start a training target scheduled for the current day:

1. Enter the pre-training mode by pressing first the BACK button and then tapping Start training.
2. You'll be prompted to start a training target you've scheduled for the day.

3. Tap to view the target information.
4. Press BACK to return to pre-training mode, and choose the sport profile you want to use.
5. When the watch has found all the signals, tap the display. Recording started is displayed and you can start training.

FOLLOW YOUR PROGRESS

Sync your training results from your device to the Flow web service via the USB cable or the Flow app. Follow your progress from the Programs tab. You'll see an overview of your current program, and how you've progressed.

RUNNING INDEX

Running Index offers an easy way to monitor running performance changes. The Running index score is an estimate of your maximal aerobic running performance (VO2max). By recording your Running Index over time, you see how efficient your running is and how you improve your running performance. Improvement means that running at a given pace requires less of an effort, or that your pace is faster at a given level of exertion.

To receive the most accurate information on your performance, make sure you have set your HRmax value.

Running Index is calculated during every training session when heart rate is measured and the GPS function is on/Stride Sensor is in use, and when the following requirements apply:

- Sport profile used is a running type sport (Running, Road Running, Trail running etc.)
- Speed should be 6 km/h / 3,75 mi/h or faster and duration 12 minutes minimum

Calculation begins when you start recording the session. During a session, you may stop twice, for example, at traffic lights without interrupting the calculation.
You can view your Running Index in the summary of your training session on your watch. Follow your progress and see race time estimations in the Polar Flow web service.

Compare your result to the table below.

The classification is based on a literature review of 62 studies where VO2max was measured directly in healthy adult subjects in the USA, Canada and 7 European countries. Reference: Shvartz E, Reibold RC. Aerobic fitness norms for males and females aged 6 to 75 years: a review. Aviat Space Environ Med; 61:3-11, 1990.
There may be some daily variation in the Running Indexes. Many factors influence Running Index. The value you receive on a given day is affected by changes in running circumstances, for example different surface, wind or temperature, in addition to other factors.

**LONG-TERM ANALYSIS**

The single Running Index values form a trend that predicts your success in running certain distances. You can find your Running Index report in the Polar Flow web service under the **PROGRESS** tab. The report shows you how your running performance has improved over a longer time period. If you're using the Polar Running program to train for a running event, you can follow your Running Index progress to see how your running is improving towards the goal.

The following chart estimates the duration that a runner can achieve in certain distances when performing maximally. Use your long-term Running Index average in the interpretation of the chart. The prediction is best for those Running Index values that have been received at speed and running circumstances similar to the target performance.

**TRAINING BENEFIT**

Training Benefit gives you textual feedback on the effect of each training session helping you to better understand the effectiveness of your training. **You can see the feedback in Flow app and Flow web service.** To get the feedback, you need to have trained at least a total of 10 minutes in the heart rate zones.

Training Benefit feedback is based on heart rate zones. It reads into how much time you spend and how many calories you burn in each zone.

The descriptions of different training benefit options are listed in the table below:

<table>
<thead>
<tr>
<th>Feedback</th>
<th>Benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum training+</td>
<td>What a session! You improved your sprint speed and the nervous system of your muscles, which make you more efficient. This session also increased your resistance to fatigue.</td>
</tr>
<tr>
<td>Maximum training</td>
<td>What a session! You improved your sprint speed and the nervous system of your muscles, which make you more efficient.</td>
</tr>
<tr>
<td>Maximum &amp; Tempo training</td>
<td>What a session! You improved your speed and efficiency. This session also significantly developed your aerobic fitness and your ability to sustain high intensity effort for longer.</td>
</tr>
<tr>
<td>Tempo &amp; Maximum training</td>
<td>What a session! You significantly improved your aerobic fitness and your ability to sustain high intensity effort for longer. This session also developed your speed and efficiency.</td>
</tr>
<tr>
<td>Tempo training+</td>

<tr>
<td>Basic training, long</td>
<td>Great! This long, low intensity session improved your basic endurance and your body's ability to burn fat during exercise.</td>
</tr>
<tr>
<td>Basic training</td>
<td>Well done! This low intensity session improved your basic endurance and your body's ability to burn fat during exercise.</td>
</tr>
<tr>
<td>Recovery training</td>
<td>Very nice session for your recovery. Light exercise like this allows your body to adapt to your training.</td>
</tr>
</tbody>
</table>

**SMART CALORIES**

The most accurate calorie counter on the market calculates the number of calories burned based on your individual data:

- Body weight, height, age, gender
- Individual maximum heart rate \( (HR_{\text{max}}) \)
- The intensity of your training or activity
- Individual maximal oxygen uptake \( (VO_2{}_{\text{max}}) \)

The calorie calculation is based on an intelligent combination of acceleration and heart rate data. The calorie calculation measures your training calories accurately.

You can see your cumulative energy expenditure (in kilocalories, kcal) during training sessions, and your total kilocalories of the session after afterwards. You can also follow your total daily calories.

**CONTINUOUS HEART RATE**

The Continuous heart rate feature measures your heart rate around the clock. It enables a more accurate measurement of daily calorie consumption and your overall activity because also physical activities with very little wrist movement, such as cycling, can now be tracked.

**Continuous heart rate on your watch**

You can turn the Continuous heart rate feature on, off or to night-time only mode on your watch in **Settings > General settings > Continuous HR tracking**.
In time view, swipe left or right to navigate to the heart rate watch face. Tap the display to open detailed view.

When the feature is on, the watch continuously measures your heart rate and displays it on the Heart rate watch face. When opening the details, you can check your highest and lowest heart rate readings of the day and also view what your lowest heart rate reading of the previous night was.

The watch tracks your heart rate in 5-minute intervals and records the data for later analysis in the Flow app or web service. If the watch detects that your heart rate is elevated, it starts to record your heart rate continuously. Continuous recording can also start based on your wrist movements, for example, when you're walking with a fast enough pace for at least one minute. The continuous recording of your heart rate stops automatically when your activity level drops low enough.

When your watch detects that your arm is not moving or when your heart rate is not elevated it tracks your heart rate in 5-minute cycles to find your lowest reading of the day.

In some cases, it is possible that you've seen a higher or lower heart rate on your watch during the day than is shown in the continuous heart rate summary as the highest or lowest reading of your day. This can happen if the reading you've seen falls outside the tracking interval.

The LEDs on the back of your watch are always on when the continuous heart rate feature is on and the sensor on the back is in touch with your skin. For instructions on how to wear your watch for accurate heart rate readings from the wrist, see Wrist-based heart rate measurement.

You can follow the Continuous Heart Rate data in more detail and in longer periods in Polar Flow, either in web or in the mobile app. Learn more about the Continuous Heart Rate feature in this in-depth guide.
24/7 ACTIVITY TRACKING

The Polar Ignite tracks your activity with an internal 3D accelerometer that records your wrist movements. It analyzes the frequency, intensity and regularity of your movements together with your physical information, allowing you to see how active you really are in your everyday life, on top of your regular training. You should wear your watch on your non-dominant hand to ensure you get the most accurate activity tracking.

ACTIVITY GOAL

You’ll get your personal activity goal when you set up your watch. The activity goal is based on your personal data and activity level setting, which you can find on your watch (Settings > Physical settings > Activity level), in the Polar Flow app or in the Polar Flow web service.

If you want to change your goal, open your Flow app, tap your name/profile photo in the menu view, and swipe down to see Activity goal. Or go to flow.polar.com and sign in to your Polar account. Then click your name > Settings > Activity goal. Choose one of the three activity levels that best describes your typical day and activity. Below the selection area, you can see how active you need to be to reach your daily activity goal on the chosen level.

The time you need to be active during the day to reach your activity goal depends on the level you have chosen and the intensity of your activities. Meet your goal faster with more intense activities or stay active at a slightly more moderate pace throughout the day. Age and gender also affect the intensity you need to reach your activity goal. The younger you are, the more intense your activity needs to be.

ACTIVITY DATA ON YOUR WATCH

In time view, swipe left or right to navigate to the Activity watch face.
The circle around the watch face and the percentage below time and date show your progress towards your daily activity goal. The circle fills with light blue color as you are active.

In addition, you can see the following details of your day's accumulated activity:

- Steps you’ve taken so far. The amount and type of body movements are registered and turned into an estimation of steps.
- Active time tells you the cumulative time of body movements that benefit your health.
- Calories you’ve burned through training, activity and BMR (Basal metabolic rate: the minimum metabolic activity required to maintain life).

Inactivity alert 🔺🔺

It's widely known that physical activity is a major factor in maintaining health. In addition to being physically active, it's important to avoid prolonged sitting. Sitting for long periods of time is bad for your health, even on those days when you train and gain enough daily activity. Your Ignite spots if you're being inactive for too long during your day and this way helps you to break up your sitting to avoid the negative effects it has on your health.

If you've been still for 55 minutes, you'll get an inactivity alert: It's time to move is shown along with a small vibration. Stand up and find your own way to be active. Take a short walk, stretch, or do some other light activity. The message goes away when you start moving or press the BACK button. If you don't get active in five minutes, you'll get an inactivity stamp, which you can see on the Flow app and Flow web service after syncing. The Flow app and Flow web service show you the whole history of how many inactivity stamps you have received. This way you can check back on your daily routine and make changes towards a more active life.

**ACTIVITY DATA IN THE FLOW APP AND WEB SERVICE**

With the Flow app you can follow and analyze your activity data on the go and sync it wirelessly from your watch to the Flow web service. The Flow web service gives you the most detailed insight into your activity information. With the help of the activity reports (under the PROGRESS tab), you can follow the long-term trend of your daily activity. You can choose to view either daily, weekly or monthly reports.

Learn more about the 24/7 Activity tracking feature in this [in-depth guide](#).

**ACTIVITY BENEFIT**

Activity benefit gives you feedback on the health benefits that being active has given you, and also on what kind of unwanted effects sitting for too long has caused to your health. The feedback is based on international guidelines and
research on the health effects of physical activity and sitting behavior. The core idea is: the more active you are, the more benefits you get!

Both the Flow app and Flow web service show the activity benefit of your daily activity. You can view the activity benefit on daily, weekly and monthly basis. In the Flow web service, you can also view the detailed information on health benefits.

For more information, see 24/7 Activity Tracking.

**SPORT PROFILES**

Sport profiles are the sport choices you have on your watch. We have created four default sport profiles to your watch, but you can add new sport profiles in the Polar Flow app or web service and sync them to your watch, and this way create a list of all your favorite sports.

You can also define specific settings for each sport profile. For example, you can create tailored training views for each sport you do and choose what data you want to see when you train: just your heart rate or just speed and distance—whatever suits you and your training needs and requirements best.

You can have a maximum of 20 sport profiles on your watch at a time. The number of sport profiles in Polar Flow mobile app and Polar Flow web service is not limited.

For more information, see Sport Profiles in Flow.

Using the sport profiles makes it possible for you to keep up with what you've done and to see the progress you've made in different sports. See your training history and follow your progress in the Flow web service.

You can use Polar Ignite with Polar Club during group exercise classes in fitness clubs. Select one of the indoor sport profiles for the training session and make sure that the Heart rate visible to other device feature is set on in the sport profile settings.
HEART RATE ZONES

Polar heart rate zones introduce a new level of effectiveness in heart rate-based training. Training is divided into five heart rate zones based on percentages of maximum heart rate. With heart rate zones, you can easily select and monitor training intensities.

<table>
<thead>
<tr>
<th>Target zone</th>
<th>Intensity % of HR&lt;sub&gt;max&lt;/sub&gt;*</th>
<th>Example: Heart rate zones**</th>
<th>Example durations</th>
<th>Training effect</th>
</tr>
</thead>
</table>
| MAXIMUM     | 90–100%                       | 171–190 bpm                 | less than 5 minutes | Benefits: Maximal or near maximal effort for breathing and muscles.  
Feels like: Very exhausting for breathing and muscles.  
Recommended for: Very experienced and fit athletes. Short intervals only, usually in final preparation for short events. |
| HARD        | 80–90%                        | 152–172 bpm                 | 2–10 minutes      | Benefits: Increased ability to sustain high speed endurance.  
Feels like: Causes muscular fatigue and heavy breathing.  
Recommended for: Experienced athletes for year-round training, and for various durations. Becomes more important during pre competition season. |
| MODERATE    | 70–80%                        | 133–152 bpm                 | 10–40 minutes     | Benefits: Enhances general training pace, makes moderate intensity efforts easier and improves efficiency.  
Feels like: Steady, controlled, fast breathing.  
Recommended for: Athletes training for events, or looking for performance gains. |
| LIGHT       | 60–70%                        | 114–133 bpm                 | 40–80 minutes     | Benefits: Improves general base fitness, improves recovery and boosts metabolism.  
Feels like: Comfortable and easy, low muscle and cardiovascular load. |
### Target zones

<table>
<thead>
<tr>
<th>Target zone</th>
<th>Intensity % of HR&lt;sub&gt;max&lt;/sub&gt;*</th>
<th>Example: Heart rate zones**</th>
<th>Example durations</th>
<th>Training effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>VERY LIGHT</td>
<td>50–60%</td>
<td>104–114 bpm</td>
<td>20–40 minutes</td>
<td><strong>Recommended for:</strong> Everybody for long training sessions during base training periods and for recovery exercises during competition season. <strong>Benefits:</strong> Helps to warm up and cool down and assists recovery. <strong>Feels like:</strong> Very easy, little strain. <strong>Recommended for:</strong> For recovery and cool-down, throughout training season.</td>
</tr>
</tbody>
</table>

* HR<sub>max</sub> = Maximum heart rate (220-age).

** Heart rate zones (in beats per minute) for a 30-year-old person, whose maximum heart rate is 190 bpm (220–30).

Training in heart rate zone 1 is done at a very low intensity. The main training principle is that performance improves when recovering after, and not only during training. Accelerate the recovery process with very light intensity training.

Training in heart rate zone 2 is for endurance training, an essential part of any training program. Training sessions in this zone are easy and aerobic. Long-duration training in this light zone results in effective energy expenditure. Progress will require persistence.

Aerobic power is enhanced in heart rate zone 3. The training intensity is higher than in sport zones 1 and 2, but still mainly aerobic. Training in sport zone 3 may, for example, consist of intervals followed by recovery. Training in this zone is especially effective for improving the efficiency of blood circulation in the heart and skeletal muscles.

If your goal is to compete at top potential, you will have to train in heart rate zones 4 and 5. In these zones, you exercise anaerobically in intervals of up to 10 minutes. The shorter the interval, the higher the intensity. Sufficient recovery between intervals is very important. The training pattern in zones 4 and 5 is designed to produce peak performance.

The Polar target heart rate zones can be personalized by using a laboratory measured HRmax value, or by taking a field test to measure the value yourself. You can edit the heart rate zone limits separately on each sport profile you have on your Polar account in the Polar Flow web service.

When training in a target heart rate zone, try to make use of the entire zone. The mid-zone is a good target, but keeping your heart rate at that exact level all the time is not necessary. Heart rate gradually adjusts to training
intensity. For instance, when crossing from heart rate target zone 1 to 3, the circulatory system and heart rate will adjust in 3-5 minutes.

Heart rate responds to training intensity depending on factors such as fitness and recovery levels, as well as environmental factors. It is important to look out for subjective feelings of fatigue, and to adjust your training program accordingly.

**SPEED ZONES**

With the speed/pace zones you can easily monitor speed or pace during your session, and adjust your speed/pace to achieve the targeted training effect. The zones can be used to guide the efficiency of your training during sessions, and help you mix up your training with different training intensities for optimal effects.

**SPEED ZONES SETTINGS**

The speed zone settings can be adjusted in the Flow web service. There are five different zones, and zone limits can be manually adjusted or you can use the default ones. They are sport specific, allowing you to adjust the zones to best suit each sport. The zones are available in running sports (including team sports that involve running), cycling sports as well as rowing and canoeing.

**Default**

If you choose **Default**, you cannot change the limits. The default zones are an example of speed/pace zones for a person with a relatively high fitness level.

**Free**

If you choose **Free**, all limits can be changed. For example, if you have tested your actual thresholds, such as anaerobic and aerobic thresholds, or upper and lower lactate thresholds, you can train with zones based on your individual threshold speed or pace. We recommend that you set your anaerobic threshold speed and pace as the minimum for zone 5. If you also use aerobic threshold, set that as the minimum of zone 3.

**TRAINING TARGET WITH SPEED ZONES**

You can create training targets based on speed/pace zones. After synchronizing the targets via FlowSync, you’ll receive guidance from your training device during training.

**DURING TRAINING**

During your training you can view which zone you are currently training in and the time spent in each zone.

**AFTER TRAINING**

In the training summary on your watch, you’ll see an overview of the time spent in each speed zone. After syncing, detailed visual speed zone information can be viewed in the Flow web service.
SPEED AND DISTANCE FROM THE WRIST

Your watch measures speed and distance from your wrist movements with a built-in accelerometer. This feature comes in handy when running indoors or in places with limited GPS signals. For maximum accuracy make sure you've set your handedness and height correctly. Speed and distance from the wrist works best when running at a pace that is natural and feels comfortable for you.

Wear your watch snugly on your wrist to avoid any shaking. To get consistent readings it should always be worn on the same position on your wrist. Avoid wearing any other devices like watches, activity trackers or phone armbands on the same arm. In addition, do not hold anything in the same hand like a map or a phone.

Speed and distance from the wrist is available in the following running type sports: Walking, Running, Jogging, Road running, Trail running, Treadmill running, Track and field running and Ultra running. To see speed and distance during a training session, make sure you have speed and distance added to the training view of the sport profile you use when running. This can be done in Sport Profiles in the Polar Flow mobile app or in the Flow web service.

SWIMMING METRICS

Swimming metrics help you analyze each swimming session, and follow your performance and progress in the long run.

To get the most accurate information, make sure your have set which hand you wear your watch on. You can check that you've set which hand you wear your watch from the product settings in Flow.

POOL SWIMMING

When using the Swimming or Pool swimming profile, the watch records your swim distance, time and pace, stroke rate, rest times and also identifies your swimming style. In addition, with the help of the SWOLF score you can keep track of your development.

Pace and Distance: The pace and distance measurements are based on pool length, therefore to get accurate data always make sure you have set the correct pool length. Your watch recognizes when you turn, and uses this information to give you accurate pace and distance.

Strokes: Your watch tells you how many strokes you take in a minute or per pool length. This information can be used to find out more about your swimming technique, rhythm and timing.

Swimming Styles: Your watch recognizes your swimming style, and calculates style specific metrics as well as totals for your whole session. Styles the watch recognizes:

- Freestyle
- Backstroke
- Breaststroke
- Butterfly

SWOLF (short for swimming and golf) is an indirect measure of efficiency. SWOLF is calculated by adding together your time and the amount of strokes it takes you to swim a pool length. For instance, 30 seconds and 10 strokes to
swim the length of a pool will equal a SWOLF score of 40. Generally, the lower your SWOLF is for a certain distance and style, the more efficient you are.

SWOLF is highly individual, and thus should not be compared to SWOLF scores other people have swam. It's rather a personal tool that can help you improve and fine-tune your technique, and find an optimal efficiency for different styles.

**POOL LENGTH SETTING**

It’s important that you choose the correct pool length, as it affects pace, distance and stroke calculation, as well as your SWOLF score. The default lengths are 25 meters, 50 meters and 25 yards, but you can also set it manually to a custom length. The minimum length that can be chosen is 20 meters/yards.

The chosen pool length is shown in pre-training mode. To change the pool length, tap the quick menu icon 📊 to access the **Pool length** setting and set the correct length.

**OPEN WATER SWIMMING**

When using the Open water swimming profile, the watch records your swim distance, time and pace, stroke rate for freestyle as well as your route.

*Freestyle is the only style that the open water swimming profile recognizes.*

**Pace and Distance**: Your watch uses GPS to calculate pace and distance during your swim.

**Stroke rate for freestyle**: Your watch records your average and maximum stroke rates (how many strokes you take per minute) for your session.

**Route**: Your route is recorded with GPS, and you can view it on a map after your swim in the Flow app and web service. GPS does not work underwater, and because of this your route is filtered from GPS data acquired when your hand is out of the water or very close to the water surface. External factors such as water conditions and satellite positions can affect the accuracy of the GPS data, and as a result data from the same route can vary from day to day.

**MEASURING HEART RATE IN WATER**

Your watch automatically measures your heart rate from your wrist with the new Polar Precision Prime sensor fusion technology, offering an easy and comfortable way to measure your heart rate while swimming. Although water may prevent the wrist-based heart rate measurement from working optimally, the accuracy of Polar Precision Prime is sufficient to allow you monitor your average heart rate and heart rate zones during your swimming sessions, get accurate calorie burn readings, your Training Load from the session and the Training Benefit feedback based on your heart rate zones.

To ensure the best possible accuracy of your heart rate data, it's important to wear the watch snugly on your wrist (even more snugly than in other sports). See [Training with wrist based heart rate](#) for instructions on wearing your watch during training.
Note that you can't use a Polar heart rate sensor with a chest strap with your watch when swimming because Bluetooth doesn't work under water.

**START A SWIMMING SESSION**

1. Press BACK to enter the main menu, choose **Start training**, and then browse to the **Swimming, Pool swimming** or **Open water swimming** profile.
2. **When using the Swimming/Pool swimming profile**, check that the pool length is correct (shown on the display). To change the pool length, tap the quick menu icon and tap **Pool length** and set the correct length.
3. Press START to begin training recording.

**DURING YOUR SWIM**

You can customize what is shown on the display in the sport profiles section in the Flow web service. The default training views in the swimming sport profiles the following information:

- Your heart rate and the heart rate ZonePointer
- Distance
- Duration
- Rest time (Swimming and Pool swimming)
- Pace (Open water swimming)
- Heart rate graph
- Average heart rate
- Maximum heart rate
- Time of day

**AFTER YOUR SWIM**

An overview of your swimming data is available in the training summary on your watch right after your session. You can see the following information:

- The date and time when your session started
- The duration of the session
- Swimming distance
- Average heart rate
- Maximum heart rate
- Cardio Load
Heart rate zones

Calories

Fat burn % of calories

Average pace

Maximum pace

Stroke rate (how many strokes you take per minute)

- Average stroke rate
- Maximum stroke rate

Sync your watch with Flow for a more detailed visual representation of your swim including a detailed breakdown of your pool swimming sessions, your heart rate, pace and stroke rate curves.

PHONE NOTIFICATIONS

The phone notifications feature allows you to get alerts about incoming calls, messages and notifications from apps onto your watch. You'll get the same notifications on your watch that you get on your phone screen. Phone notifications are available for iOS and Android phones.

To use phone notifications, you need to have the Flow app running on your phone, and it also needs to be paired with your watch. For instructions, see Pairing a mobile device with your watch

SET PHONE NOTIFICATIONS ON

On your watch go to Settings > General settings > Phone notifications to set them on. Set phone notifications Off or On, when not training. Note that you will not receive any notifications during training sessions.
In Flow app go to the Devices menu, choose your device and make sure Smart notifications/Phone notifications are On.

After setting the notifications on sync your watch with the Flow app.

Please note that when phone notifications are set on the battery of your watch and phone will run out faster because Bluetooth is continuously on.

DO NOT DISTURB

If you want to disable notifications and call alerts for a certain period of time, set do not disturb on. When it is on, you will not receive any notifications or call alerts during the time period you have set.

On your watch go to Settings > General settings > Do not disturb. Choose Off, On or On (22.00 - 7.00), and the period when do not disturb is on. Choose when it Starts at and Ends at.

VIEW NOTIFICATIONS

Whenever you receive a notification your watch will vibrate and a red dot will appear at the bottom of the display. View the notification by swiping up from the bottom of the display or by turning your wrist to look at the watch immediately after the watch vibrates.

When receiving a call your watch will vibrate and show the caller. You can also answer or decline the call with your watch.

CHANGEABLE WRISTBANDS

The changeable wristbands let you personalize your watch to match every situation and style so you can wear it all the time and make the best use of the 24/7 activity tracking, continuous heart rate measurement and sleep tracking.

You can choose your favorite wristband from Polar's selection or use any other watch band that uses 20 mm spring bars.

CHANGING THE WRISTBAND

The wristband of your watch is quick and simple to change.

1. To detach a band, pull the quick-release knob inwards and pull the band away from the watch.
2. To attach a band, insert the pin (the opposite side of the quick-release knob) into the pin hole on the watch.
3. Pull the quick-release knob inwards and align the other end of the pin with the hole on the watch.
4. Release the knob to lock the band in place.
COMPATIBLE SENSORS

Enhance your training experience, and achieve a more complete understanding of your performance with compatible Bluetooth® sensors.

View a full list of compatible Polar sensors and accessories

Before taking a new sensor into use, it has to be paired with your watch. Pairing only takes a few seconds, and ensures that your watch receives signals from your sensors only, and allows disturbance-free training in a group. Before entering an event or race, make sure that you do the pairing at home to prevent interference due to data transmission. For instructions, see Pairing sensors with your watch.

POLAR H10 HEART RATE SENSOR

Monitor your heart rate with maximum precision with the Polar H10 heart rate sensor with a chest strap.

Although the Polar Precision Prime is the most accurate optical heart rate measurement technology there is and works pretty much anywhere, in sports where it’s more challenging to keep the sensor stationary on your wrist or where you have pressure or movement in muscles or tendons near the sensor, the Polar 10 heart rate sensor gives you the best heart rate accuracy. The Polar H10 heart rate sensor is more responsive to rapidly increasing or decreasing heart rate, so it’s the ideal option also for interval type of training with quick sprints.

The Polar H10 heart rate sensor has an internal memory that allows you to record one training session with it without a connected training device or a mobile training app close by. You just need to pair the H10 heart rate sensor with the Polar Beat app and start the training session with the app. This way, you can for example record your heart rate from
your swimming sessions with the Polar H10 heart rate sensor. For more information see the support pages for Polar Beat and Polar H10 heart rate sensor.

When using the Polar H10 heart rate sensor during your cycling sessions, you can have your watch mounted to your bike’s handlebars to easily view your training data while riding.

PAIRING SENSORS WITH YOUR WATCH
PAIR A HEART RATE SENSOR WITH YOUR WATCH

When you’re wearing a Polar heart rate sensor that’s paired with your watch, the watch does not measure heart rate from the wrist.

1. Wear the moistened heart rate sensor.
2. On your watch, go to Settings > General Settings > Pair and sync and Tap Pair sensor or other device.
3. Touch your heart rate sensor with your watch and wait for it to be found.
4. Once the heart rate sensor is found, the device ID, for example, Polar H10 xxxxxxxxx is displayed. Tap ✔️ to start pairing.
5. Pairing done is displayed when you are done.
POLAR FLOW

POLAR FLOW APP

In the Polar Flow mobile app, you can see an instant visual interpretation of your training and activity data. You can also plan your training in the app.

TRAINING DATA

With the Polar Flow app, you can easily access the information of your past and planned training sessions and create new training targets. You can choose to create a quick target or a phased target.

Get a quick overview of your training, and analyze every detail of your performance right away. See weekly summaries of your training in the training diary. You can also share the highlights of your training with your friends with the Image sharing function.

ACTIVITY DATA

See details of your 24/7 activity. Find out how much you’re missing from your daily activity goal and how to reach it. See steps, covered distance based on steps and burned calories.

SLEEP DATA

Follow your sleeping patterns to see if they’re affected by any changes in your daily life and find the right balance between rest, daily activity and training. With the Polar Flow app, you can view the timing, amount, and quality of your sleep.

You can set your preferred sleep time to define how long you aim to sleep every night. You can also rate your sleep. You’ll receive feedback on how you slept based on your sleep data, your preferred sleep time and your sleep rating.

SPORT PROFILES

You can add, edit, remove and reorganize sport profiles easily in the Flow app. You can have up to 20 sport profiles active in Flow app and in your watch.

For more information, see Sport profiles in Polar Flow.

IMAGE SHARING

With Flow app’s image sharing function you can share images with your training data on them to most common social media channels, like Facebook and Instagram, with your training data on them. You can either share an existing photo or take a new one and customize it with your training data. If you had GPS recording on during your training session, you can also share a snapshot of your training route.

To see a video, click on the following link:

Polar Flow app | Sharing training results with a photo
START USING THE FLOW APP

You can set up your watch using a mobile device and the Flow app.

To start using the Flow app, download it from the App Store or Google Play onto your mobile device. For support and more information about using the Polar Flow app, go to support.polar.com/en/support/Flow_app.

Before taking a new mobile device (smartphone, tablet) into use, it has to be paired with your watch. See Pairing for more details.

Your watch syncs your training data to the Flow app automatically after your session. If your phone has an internet connection, your activity and training data are also synced automatically to the Flow web service. Using the Flow app is the easiest way to sync your training data from your watch with the web service. For information on syncing, see Syncing.

For more information and instructions on Flow app features, visit Polar Flow app product support page.

POLAR FLOW WEB SERVICE

In the Polar Flow web service, you can plan and analyze your training in detail and learn more about your performance. Set up and customize your watch to perfectly fit your training needs by adding sport profiles and editing their settings. You can also share the highlights of you training with your friends in the Flow community, sign up for your club’s classes and get a personalized training program for a running event.

The Polar Flow web service also shows your daily activity goal completion percentage and the details of your activity, and helps you understand how your daily habits and choices affect your well-being.

You can set up your watch with your computer at flow.polar.com/start. There you are guided to download and install the FlowSync software for syncing data between your watch and the web service, and to create a user account for the web service. If you did the setup using a mobile device and the Flow app, you can log into the Flow web service with the credentials you created in the setup.

FEED

In Feed you can see what you and your friends have been up to lately. Check out the latest training sessions and activity summaries, share your best achievements, comment and like your friends’ activities.

DIARY

In Diary you can see your daily activity, sleep, planned training sessions (training targets), as well as review past training results.

PROGRESS

In Progress you can follow your development with reports.
Training reports are a handy way to follow your progress in training over longer periods. In week, month and year reports you can choose the sport for the report. In custom period, you can choose both the period and the sport. Choose the time period and sport for report from the drop-down lists, and press the wheel icon to choose what data you want to view in the report graph.

With the help of the activity reports, you can follow the long-term trend of your daily activity. You can choose to view either daily, weekly or monthly reports. In the activity report you can also see your best days regarding daily activity, steps, calories and sleep from your chosen time period.

The Running Index report is a tool to help you monitor your long term Running Index development, and estimate your success in running 10k or a half marathon for example.

In the Cardio Load report you can follow how your Cardio Load builds up over time and see how your training loads have varied over the past week or months. Following your Cardio Load buildup helps you understand how your past training affects your performance today, plan future training and continue improving your fitness.

COMMUNITY

In the Flow Groups, Clubs and Events you can find fellow exercisers who train for the same event or in the same health club as you do. Or you can create your own group for the people you want to train with. You can share your exercises and training tips, comment other members’ training results and be part of the Polar Community. In Flow Clubs you can view class schedules and sign up for classes. Join in and get motivation from your social training communities!

To see a video, click on the following link:

Polar Flow Events

PROGRAMS

The Polar Running Program is tailored for your goal, based on Polar heart rate zones, taking your personal attributes and training background into account. The program is intelligent, it adapts along the way based on your development. The Polar Running Programs are available for 5k, 10k, half marathon and marathon events, and consist of two to five running exercises per week depending on the program. It’s super simple!

For support and more information about using the Flow web service, go to, support.polar.com/en/support/flow.

SPORT PROFILES IN POLAR FLOW

There are 14 default sport profiles on your watch. In the Polar Flow app or web service, you can add new sport profiles to your sports list and edit their settings. Your watch can contain a maximum of 20 sport profiles. If you have over 20 sport profiles in the Polar Flow app and web service, the first 20 in the list are transferred to your watch when syncing.

You can change the order of your sport profiles by dragging and dropping them. Choose the sport you want to move and drag it into the place you want to put it in the list.

To see a video, click on one of the following links:

Polar Flow app | Sport profile editing
ADD A SPORT PROFILE

In the Polar Flow mobile app:

1. Go to Sport profiles.
2. Tap the plus sign in the upper right corner.
3. Choose a sport from the list. Tap Done on Android app. The sport is added to your sport profiles list.

In the Polar Flow web service:

1. Click your name/profile photo in the upper right corner.
2. Choose Sport Profiles.
3. Click Add sport profile, and choose the sport from the list.
4. The sport is added to your sport list.

You can’t create new sports yourself. The sports list is controlled by Polar, because each sport has certain default settings and values, which affect, for example, the calorie calculation and the training load and recovery feature.

EDIT A SPORT PROFILE

In the Polar Flow mobile app:
1. Go to **Sport profiles**.
2. Choose a sport and tap **Change settings**.
3. When you’re ready, tap **Done**. Remember to sync the settings to your watch.

In the Flow web service:

1. Click your name/profile photo in the upper right corner.
2. Choose **Sport Profiles**.
3. Click **Edit** under the sport you want to edit.

In each sport profile, you can edit the following information:

**Basics**

- Automatic lap (Can be set to duration or distance-based or turned off)

**Heart Rate**

- Heart rate view (Beats per minute or % of maximum)
- Heart rate visible to other devices (This means that compatible devices using Bluetooth Smart wireless technology, e.g. gym equipment, can detect your heart rate. You can also use your watch during Polar Club classes to broadcast your heart rate to the Polar Club system.)
- Heart rate zone settings (With the heart rate zones you can easily select and monitor training intensities. If you choose Default, you cannot change heart rate limits. If you choose Free, all limits can be changed. Default heart rate zone limits are calculated from your maximum heart rate.)

**Speed/Pace settings**

- Speed/Pace view (Choose speed km/h / mph or pace min/km / min/mi)
- Speed/pace zone settings (With the speed/pace zones you can easily select and monitor your speed or pace, depending on your selection. Default zones are an example of speed/pace zones for a person with a relatively
high fitness level. If you choose Default, you can’t change the limits. If you choose Free, all limits can be changed.)

**Training views**

Choose what information you see on your training views during your sessions. You can have a total of eight different training views for each sport profile. Each training view can have a maximum of four different data fields.

Click the pencil icon on an existing view to edit it, or click **Add new view**.

**Gestures and feedback**

- Vibration feedback (You can choose to have vibration on or off)

**GPS and altitude**

- Automatic pause: To use **Automatic pause** during training, you need to have GPS set to **High Accuracy** or a Polar stride sensor in use. Your sessions pause automatically when you stop, and continue automatically when you start.
- Choose the GPS recording rate (Can be set off or to **High accuracy**, meaning that the GPS recording is on)

When you’re done with the sport profile settings, click **Save**. Remember to sync the settings to your watch.

**PLANNING YOUR TRAINING**

You can plan your training and create personal training targets for yourself in the Polar Flow web service or in the Polar Flow app.

**CREATE A TRAINING PLAN WITH THE SEASON PLANNER**

The **Season Planner** in the Flow web service is a great tool for creating a tailored annual training plan. No matter what your training goal is, Polar Flow helps you create a comprehensive plan to reach it. You can find the Season Planner tool from the **Programs** tab in the Polar Flow web service.
Polar Flow for Coach is a free remote coaching platform that allows your coach plan every detail of your training from full season plans to individual workouts.

CREATE A TRAINING TARGET IN THE POLAR FLOW APP AND WEB SERVICE

Note that the training targets need to be synced to your watch with FlowSync or via Flow app before you can use them. Your watch will guide you towards completing your target during training.

To create a training target in the Polar Flow web service:

1. Go to Diary, and click Add > Training target.
2. In the Add training target, choose Sport, enter Target name (maximum 45 digits), Date and Time and any Notes (optional) you want to add.

Then choose the type of your training target from the following:

DURATION TARGET

Choose a duration for your target in hours and minutes.

1. Choose Duration.
2. Enter the duration.
3. Click the **Add to favorites ⭐** to add the target to your list of favorites, if you want.
4. Click **Save** to add the target to your **Diary**.

**DISTANCE TARGET**

Choose a distance for your target in kilometers or miles.

1. Choose **Distance**.
2. Enter the distance.
3. Click the **Add to favorites ⭐** to add the target to your list of favorites, if you want.
4. Click **Save** to add the target to your **Diary**.

**CALORIE TARGET**

Choose a target based on how many calories you want to burn during your training session.

1. Choose **Calorie**.
2. Enter the amount of calories.
3. Click the **Add to favorites ⭐** to add the target to your list of favorites, if you want.
4. Click **Save** to add the target to your **Diary**.

**INTERVAL TARGET**

Choose a target based on intervals. Work some high intensity work phases and low intensity recovery periods into your training session to boost your routine.

1. Choose **Interval**.
2. Click **Repeat phases** to unlock the default interval target if, you want.
   You can edit each phase by clicking the pen icon on the right: Choose **Name** and **Duration/Distance** for each phase, **Manual** or **Automatic** next phase start, and **Select intensity**. Then click **Done**. You can go back to edit the phases you’ve added by clicking the pen icon.
3. Click the **Add to favorites ⭐** to add the target to your list of favorites, if you want.
4. Click **Save** to add the target to your **Diary**.

**PHASED TARGET**

You can split your training session into phases and set a different duration and intensity for each of them. This one is for e.g. creating an interval training session, and adding proper warm-up and cool-down phases to it.

1. Choose **Phased**.
2. Choose whether you want to **Create new** or **Use template**.
   - Creating new: Add phases to your target. Click **Duration** to add a phase based on duration or click **Distance** to add a phase based on distance. Choose **Name** and **Duration/Distance** for each phase, **Manual** or **Automatic** next phase start, and **Select intensity**. Then click **Done**. You can go back to edit the phases you’ve added by clicking the pen icon.
   - Using the template: You can edit the template phases by clicking the pen icon on the right. You can add more phases to the template as instructed above for creating a new phased target.
3. Click the **Add to favorites ⭐** to add the target to your list of favorites.
4. Click **Save** to add the target to your **Diary**.
FAVORITES

If you have created a target and added it to your favorites, you can use it as a scheduled target.

1. In your Diary, Click **Add** on the day when you want to use a favorite as a scheduled target.
2. Click **Favorite target** to open a list of your favorites.
3. Click the Favorite you want to use.
4. The Favorite is added to your diary as a scheduled target for the day. The default scheduled time for the training target is at 18.00/6pm. If you want to change the details of the training target, click the target in your Diary, and modify it to your liking. Then click **Save** to update the changes.

If you want to use an existing Favorite as a template for a training target, do the following:

1. Go to Diary, and click **Add > Training target**.
2. In the **Add training target** view, click **Favorite targets**. Your training target favorites are shown.
3. Click the Favorite as a template for your target.
4. Choose **Sport**, enter **Target name** (maximum 45 digits), **Date** and **Time** and any **Notes** (optional) you want to add.
5. Modify the Favorite according to your liking. Editing the target in this view won't change the original Favorite target.
6. Click **Add to Diary** to add the target to your Diary.

SYNC THE TARGETS TO YOUR WATCH

Remember to sync the training targets to your watch from the Flow web service via FlowSync or Flow App. If you don't sync them, they are only visible in your Flow web service Diary or Favorites list.

For information on starting a training target session, see **Start a training session**.

FAVORITES

In **Favorites**, you can store and manage your favorite training targets in the Flow web service. You can use your favorites as scheduled targets on your watch. For more information, see **Plan your training in the Flow web service**.

Your watch can have a maximum of 20 favorites at a time. The number of favorites in the Flow web service is not limited. If you have over 20 favorites in the Flow web service, the first 20 in the list are transferred to your watch when syncing. You can change the order of your favorites by dragging and dropping them. Choose the favorite you want to move and drag it into the place you want to put it in the list.

ADD A TRAINING TARGET TO FAVORITES:

1. **Create a training target**.
2. Click the favorites icon ⭐ on the lower right corner of the page.
3. The target is added to your favorites.

or

1. Open an existing target you've created from your Diary.
2. Click the favorites icon ⭐ on the lower right corner of the page.
3. The target is added to your favorites.

**EDIT A FAVORITE**

1. Click the favorites icon ⭐ on the upper right corner next to your name. All your favorite training targets are shown.
2. Click the favorite you want to edit, then click **Edit**.
3. You can change the sport, the target name, and you can add notes. You can alter the training details of the target under **Quick** or **Phased**. (For more information, see the chapter on **planning your training**.) After you've done all the needed changes, click **Update changes**.

**REMOVE A FAVORITE**

1. Click the favorites icon ⭐ on the upper right corner next to your name. All your favorite training targets are shown.
2. Click the delete icon in upper right corner of the training target to remove it from the favorites list.

**SYNCING**

You can transfer data from your watch to the Polar Flow app wirelessly via Bluetooth connection. Or, you can sync your watch with the Polar Flow web service by using a USB port and the FlowSync software. To be able to sync data between your watch and the Flow app you need to have a Polar account. If you want to sync data from your watch directly to the web service, in addition to a Polar account, you need the FlowSync software. If you've set up your watch, you have created a Polar account. If you set up your watch using a computer, you have the FlowSync software on your computer.

Remember to sync and keep your data up-to-date between your watch, the web service and the mobile app wherever you are.

**SYNC WITH FLOW MOBILE APP**

Before syncing make sure:

- You have a Polar account and Flow app.
- Your mobile device has Bluetooth turned on, and airplane mode/flight mode is not turned on.
- You have paired your watch with your mobile. For more information, see **Pairing**.

Sync your data:

1. Sign in to the Flow app, and press and hold the BACK button on your watch.
2. **Connecting to phone** is displayed, followed by **Connecting to Polar Flow app**.
3. **Syncing completed** is displayed when you are done.

Your watch syncs with the Flow app automatically after you finish a training session if your phone is within the Bluetooth range. When your watch syncs with the Flow app, your activity and training data are also synced automatically via an internet connection to the Flow web service.

For support and more information about using the Polar Flow app, go to support.polar.com/en/support/Flow_app.
SYNC WITH FLOW WEB SERVICE VIA FLOWSYNC

To sync data with the Flow web service you need the FlowSync software. Go to flow.polar.com/start, and download and install it before trying to sync.

1. Plug your watch to your computer. Make sure FlowSync software is running.
2. The FlowSync window opens on your computer, and the syncing starts.
3. Completed is displayed when you are done.

Every time you plug in your watch to your computer, the Polar FlowSync software will transfer your data to the Polar Flow web service and sync any settings you may have changed. If the syncing does not automatically start, start FlowSync from the desktop icon (Windows) or from the applications folder (Mac OS X). Every time a firmware update is available, FlowSync will notify you, and request you to install it.

If you change settings in the Flow web service while your watch is plugged into your computer, press the synchronize button on FlowSync to transfer to the settings to your watch.

For support and more information about using the Flow web service, go to support.polar.com/en/support/flow.

For support and more information about using FlowSync software, go to support.polar.com/en/support/FlowSync.
IMPORTANT INFORMATION

BATTERY

At the end of the working life of the product Polar encourages you to minimize possible effects of waste on the environment and human health by following local waste disposal regulations and, where possible, utilizing separate collection of electronic devices. Do not dispose of this product as unsorted municipal waste.

CHARGING THE BATTERY

Before charging, please make sure there’s no moisture, dust or dirt on the charging contacts of your watch and cable. Gently wipe off any dirt or moisture. Do not charge the watch when it’s wet.

Your watch has an internal, rechargeable battery. Rechargeable batteries have a limited number of charge cycles. You can charge and discharge the battery over 500 times before a notable decrease in its capacity. The number of charge cycles also varies according to use and operating conditions.

Do not charge the battery in temperatures under 0 °C/ +32 °F or over +40 °C/ +104 °F or when the USB port is wet.

Use the USB cable included in the product set to charge it via the USB port on your computer. You can also charge the battery via a wall outlet. When charging via a wall outlet, use a USB power adapter (not included in the product set).

You can charge the battery via a wall outlet. When charging via a wall outlet, use a USB power adapter (not included in the product set). If you use a USB power adapter, make sure that the adapter is marked with "output 5Vdc" and that it provides a minimum of 500mA. Only use an adequately safety approved USB power adapter (marked with "LPS", "Limited Power Supply", "UL listed" or "CE").

Do not charge Polar products with a 9 volt charger. Using a 9 volt charger can damage your Polar product.

To charge with your computer, just plug your watch to your computer, and at the same time, you can have it synced it with FlowSync.

1. To charge your watch, plug it into a powered USB port or a USB charger with the custom cable that came in the box. The cable magnetically snaps into place, just make sure to align the ledge on the cable with the slot on your watch (marked with red).
2. **Charging** appears on the display.
3. When the battery icon is full, the watch is fully charged.

Don't leave the battery fully discharged for a long period of time or keep it fully charged all the time, because it may affect the battery life time.

**BATTERY STATUS AND NOTIFICATIONS**

**BATTERY STATUS SYMBOL**

The battery status symbol is shown when you turn your wrist to look at the watch, press the BACK button in time view, or return to time view from the menu. There is also a battery status icon in the Quick settings menu, which shows how much charge is left on the battery as a percentage.

**BATTERY NOTIFICATIONS**

- When the battery charge is low, **Battery low. Charge** is show in time mode. It is recommended to charge the watch.
- **Charge before training** is shown if the charge is too low for recording a training session.

Low battery notifications during training:

- **Battery low** is shown when the battery charge is getting low. The notification is repeated if the charge gets too low for measuring heart rate and GPS data and the heart rate measurement and GPS are switched off.
- When the battery is critically low, **Recording ended** is shown. Your watch stops the training recording and saves the training data.

When the display is blank, the battery is empty and your watch has gone to sleep mode. Charge your watch. If the battery is totally drained, it may take a while for the charging animation to appear on the display.

The operating time depends on many factors, such as the temperature of the environment in which you use your watch, the features and sensors you use, and battery aging. Frequent syncing with Flow app will also decrease the battery life. The operating time is significantly reduced in temperatures well below freezing. Wearing the watch under your overcoat helps to keep it warmer and to increase the operating time.
CARING FOR YOUR WATCH

Like any electronic device, the Polar Ignite should be kept clean and treated with care. The instructions below will help you fulfill the guarantee obligations, keep the device in peak condition and avoid any issues in charging or syncing.

KEEP YOUR WATCH CLEAN

Wash the watch under running water with a mild soap and water solution after each training session. Wipe it dry with a soft towel.

Keep the charging contacts of your watch and cable clean to ensure smooth charging and syncing.

Before charging, please make sure there’s no moisture, dust or dirt on the charging contacts of your watch and cable. Gently wipe off any dirt or moisture. Do not charge the watch when it's wet or sweaty.

Keep the charging contacts of your watch clean to effectively protect your watch from oxidation and other possible damage caused by dirt and salt water (e.g. sweat or sea water). The best way to keep the charging contacts clean is to rinse the watch after each training session with lukewarm tap water. The watch is water resistant and you can rinse it under running water without damaging the electronic components.

TAKE GOOD CARE OF THE OPTICAL HEART RATE SENSOR

Keep the optical sensor area on the back cover scratch-free. Scratches and dirt will reduce the performance of the wrist-based heart rate measurement.

STORING

Keep your training device in a cool and dry place. Do not keep it in a damp environment, in non-breathable material (a plastic bag or a sports bag) nor with conductive material (a wet towel). Do not expose the training device to direct sunlight for extended periods, such as by leaving it in a car or mounted on the bike mount. It is recommended to store the training device partially or fully charged. The battery slowly loses its charge when it is stored. If you are going to store the training device for several months, it is recommended to recharge it after a few months. This will prolong the battery lifetime.

Do not leave the device in extreme cold (below -10 °C/14 °F) and heat (above 50 °C/120 °F) or under direct sunlight.

SERVICE

During the two-year guarantee/warranty period we recommend that you have service done by an authorized Polar Service Center only. The warranty does not cover damage or consequential damage caused by service not authorized by Polar Electro. For further information, see Limited International Polar Guarantee.

For contact information and all Polar Service Center addresses, visit support.polar.com and country-specific websites.
PRECAUTIONS

Polar products (training devices, activity trackers and accessories) are designed to indicate the level of physiological strain and recovery during and after exercise session. The Polar training devices and activity trackers measure heart rate and/or tell your activity. The Polar training devices with an integrated GPS show speed, distance and location. See www.polar.com/en/products/accessories for a complete list of compatible accessories. The Polar training devices with a barometric pressure sensor measure altitude and other variables. No other use is intended or implied. The Polar training device should not be used for obtaining environmental measurements that require professional or industrial precision.

INTERFERENCE DURING TRAINING

Electromagnetic Interference and Training Equipment

Disturbance may occur near electrical devices. Also WLAN base stations may cause interference when training with the training device. To avoid erratic reading or misbehavior, move away from possible sources of disturbance.

Training equipment with electronic or electrical components such as LED displays, motors and electrical brakes may cause interfering stray signals. To solve these problems, try the following:

1. Remove the heart rate sensor strap from your chest and use the training equipment as you would normally.
2. Move the training device around until you find an area in which it displays no stray reading or does not flash the heart symbol. Interference is often worst directly in front of the display panel of the equipment, while the left or right side of the display is relatively free of disturbance.
3. Put the heart rate sensor strap back on your chest and keep the training device in this interference-free area as much as possible.

If the training device still does not work with the training equipment, it may be electrically too noisy for wireless heart rate measurement.

MINIMIZING RISKS WHEN TRAINING

Training may include some risk. Before beginning a regular training program, it is recommended that you answer the following questions concerning your health status. If you answer yes to any of these questions, we recommend that you consult a doctor before starting any training program.

• Have you been physically inactive for the past 5 years?
• Do you have high blood pressure or high blood cholesterol?
• Are you taking any blood pressure or heart medication?
• Do you have a history of breathing problems?
• Do you have symptoms of any disease?
• Are you recovering from a serious illness or medical treatment?
• Do you use a pacemaker or other implanted electronic device?
• Do you smoke?
• Are you pregnant?
Note that in addition to training intensity, medications for heart conditions, blood pressure, psychological conditions, asthma, breathing, etc., as well as some energy drinks, alcohol, and nicotine may also affect heart rate.

It is important to be sensitive to your body’s responses during training. **If you feel unexpected pain or excessive fatigue when training, it is recommended that you stop the training or continue at a lighter intensity.**

**Note!** If you are using a pacemaker or other implanted electronic device, you can use Polar products. In theory interference to pacemaker caused by Polar products should not be possible. In practice no reports exist to suggest anyone ever having experienced interference. We cannot however issue an official guarantee on our products’ suitability with all pacemakers or other implanted devices due to the variety of devices available. If you have any doubts, or if you experience any unusual sensations while using Polar products, please consult your physician or contact the implanted electronic device manufacturer to determine safety in your case.

If you are allergic to any substance that comes into contact with your skin or if you suspect an allergic reaction due to using the product, check the listed materials in [Technical Specifications](#). If you experience any skin reaction, stop using the product and consult your physician. Also inform Polar Customer Care about your skin reaction. To avoid any skin reaction to the heart rate sensor, wear it over a shirt, but moisten the shirt well under the electrodes to ensure flawless operation.

The combined impact of moisture and intense abrasion may cause color to come off the heart rate sensor’s surface, possibly staining light-colored clothes. It may also cause a darker color to come off clothing, possibly staining lighter-colored training devices. To keep a light-colored training device glowing for years to come, please make sure the clothing you wear while training does not bleed color. If you use perfume or insect repellent on your skin, you must ensure that it does not come into contact with the training device or the heart rate sensor. If you train in cold conditions (-20 °C to -10 °C / -4 °F to 14 °F) we recommend that you wear the training device under the sleeve of your jacket, directly on your skin.

Your safety is important to us. The shape of the Polar stride sensor Bluetooth® Smart is designed to minimize the possibility of if getting caught in something. In any case, be careful when running with the stride sensor in brushwood, for example.

**TECHNICAL SPECIFICATION**

**POLAR IGNITE**

<table>

POLAR FLOW MOBILE APPLICATION COMPATIBILITY

Polar devices work with most modern smartphones. Here are the minimum requirements:

- iOS devices with iOS 11 or later
- Android mobile devices with Bluetooth 4.0 capability and Android 5 or later (check full phone specification from your phone manufacturer)

There is plenty of variation between how different Android devices handle the technologies used in our products and services, such as Bluetooth Low Energy (BLE) and different standards and protocols. Because of this, compatibility varies between phone manufacturers, and unfortunately Polar cannot guarantee that all features can be used with all devices.

WATER RESISTANCE OF POLAR PRODUCTS

Most Polar products can be worn when swimming. They are not, however, diving instruments. When measuring heart rate in water with a GymLink compatible Polar device and heart rate sensor, you may experience interference for the following reasons:

- Pool water with high chlorine content, and seawater are very conductive. The electrodes of the heart rate sensor may short-circuit, preventing ECG signals from being detected by the heart rate sensor.
- Jumping into water or strenuous muscle movement during competitive swimming may shift the heart rate sensor to a location on the body where ECG signals cannot be picked up.
- The ECG signal strength is individual and may vary depending on the individual's tissue composition. Problems occur more frequently when measuring heart rate in water.

In the watch industry, water resistance is generally indicated as meters, which means the static water pressure of that depth. Polar uses this same indication system. Water resistance of Polar products is tested according to International Standard ISO 22810 or IEC60529. Every Polar device that has water resistance indication is tested before the delivery to stand water pressure.

Polar products are divided into four different categories according to their water resistance. Check the back of your Polar product for the water resistance category, and compare it to the chart below. Please note that these definitions do not necessarily apply to products of other manufacturers.

When performing any underwater activity, the dynamic pressure generated by moving in water is greater than the static pressure. This means that moving the product under water subjects it to a greater pressure than if the product were stationary.

**REGULATORY INFORMATION**

This product is compliant with Directives 2014/53/EU and 2011/65/EU. The relevant Declaration of Conformity and other regulatory information for each product are available at www.polar.com/en/regulatory_information.

This crossed out wheeled bin marking shows that Polar products are electronic devices and are in the scope of Directive 2012/19/EU of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE) and batteries and accumulators used in products are in the scope of Directive 2006/66/EC of the European Parliament and of the Council of 6 September 2006 on batteries and accumulators and waste batteries and accumulators. These products and batteries/accumulators inside Polar products should thus be disposed of separately in EU countries. Polar encourages you to minimize possible effects of waste on the environment and human health also outside the European Union by following local waste disposal regulations and, where possible, utilize separate collection of electronic devices for products, and battery and accumulator collection for batteries and accumulators.

To see the Polar Ignite-specific regulatory labels, go to Settings > General settings > About your watch.

**LIMITED INTERNATIONAL POLAR GUARANTEE**

* Polar Electro Oy issues a limited international guarantee for Polar products. For products which have been sold in the USA or Canada, guarantee is issued by Polar Electro, Inc.
* Polar Electro Oy/Polar Electro Inc. guarantees the original consumer/purchaser of the Polar product that the product will be free from defects in material or workmanship for two (2) years from the date of purchase, with the exception of wristbands made of silicone or plastic, which are subject to a guarantee period of one (1) year from the date of purchase.
* The guarantee does not cover normal wear and tear of the battery, or other normal wear and tear, damage due to misuse, abuse, accidents or non-compliance with the precautions; improper maintenance, commercial use, cracked, broken or scratched cases/displays, textile armband or textile or leather wristband, elastic strap (e.g. heart rate sensor chest strap) and Polar apparel.
• The guarantee does also not cover any damage/s, losses, costs or expenses, direct, indirect or incidental, consequential or special, arising out of, or related to the product.
• Guarantee does not cover products which have been purchased second hand.
• During the guarantee period, the product will be either repaired or replaced at any of the authorized Polar Central Services regardless of the country of purchase.
• Guarantee issued by Polar Electro Oy/Inc. does not affect the consumer’s statutory rights under applicable national or state laws in force, or the consumer’s rights against the dealer arising from their sales/purchase contract.
• You should keep the receipt as a proof of purchase!
• Guarantee with respect to any product will be limited to countries where the product has been initially marketed by Polar Electro Oy/Inc.
